

Inferred Canon Fixes — Part 2

Inferred Canon Fixes — Part 2. Continuation of  [Inferred Canon Fixes](#) — Sections 1–10 live there. This page carries **Section 11 onward** so the doc stays loadable as it grows. Same rules: nothing here is live canon until you approve it; once you do, I'll write the fix into the relevant hub page.

Key:  Proposed fix ·  Needs your ruling ·  Mechanical date/ordering fix

11 · The Restoration (~50 – 400 AR)

Pairs with: [TIMELINE](#), [ERA'S REFERENCE](#), [House Patton](#), , [The Solisian Academy](#), [KEY WORDS AND TERMS](#), [Name Evolution Across Eras](#), [Magic System](#)

Real-world anchors (this era). Per your era → period map, the recovery from Goteivati is **Louis XIV's France (~1643–1715)** — and the Sun King fit is almost too good for a world that worships a sun god. Where Goteivati ruled by *terror* (the Tudor Reformation, Section 10), the dynasty that buries him rules by *spectacle*: absolute monarchy perfected, the great houses tamed not on the scaffold but at court, etiquette and nearness to the throne standing in for the executioner. Louis hands you the whole kit — a **Versailles** built to cage the nobility in gold, **"l'état, c'est moi"** absolutism, a professional royal army, mercantilist state wealth, the **revocation of the Edict of Nantes** (one faith by royal will), and a court where a duke spends his whole life competing to hand the king his shirt. The Restoration is where Goteivati's blood-soaked Year Zero hardens into a *permanent, gilded order* — the Pataoiut made forever, and made beautiful.

What this era actually is

The empire comes out of the Dark Ages the way France came out of its wars of religion — not by undoing the strongman's work, but by making it permanent and beautiful. **Goteivati is overthrown and deposed.** The terror doesn't fade on its own and it doesn't end with a deathbed; it is ended by *force*, and the man who called himself the Reconstruction's deliverer is pulled down. But what follows is not a return to the matriarchal world he erased.

His **bastard son, Hefu Bahsi** — born to **Lady Reyqe Bahsi of House Bahsi**, the house-bred mistress who shared Goteivati's bed for decades — is lifted onto the throne by his mother's maneuvering and crowned **Emperor Hefu Patton**. It is **Hefu, not Goteivati, who becomes the Sun King**: he takes his father's Year Zero and turns it into a gilded, permanent order. The **Ten Rules** outlast their author. The patriarchal **Pataoiut** hardens from one tyrant's decree into permanent law — and then into something heavier than law: *common sense*, the way things have simply always been. The shattered **Circle of Eternal Light** is rebuilt, but as a **crown-controlled state church** answerable to the emperor rather than the gods. And the magic registry Goteivati built out of fear (Article VII) is turned into permanent institution — the moment the **Solisian Academy** is *transformed* into the empire's formal magical-education machinery. The terror becomes a civilization.

/ Canon conflicts & errors landing in this era

-  **Goteivati is overthrown — and a bastard's line takes the throne (the era's spine; locked).** Your ruling settles the open death-gap from Section 10: the Damned does **not** die quietly or rule into old age — he is **deposed by force**. Power passes to his **bastard son Hefu Bahsi**, crowned **Emperor Hefu Patton**, installed by his mother **Lady Reyqe Bahsi of House Bahsi** (Goteivati's long-time mistress). The Sun King is **Hefu**, not his father. This is the hinge the whole era turns on, and it's *new* canon — House Bahsi rises from a mistress's house into an imperial dynasty.
-  **The Pataoiut institutionalizes here — decree → permanent law → common sense (locked).** Goteivati *declared* the patriarchal Pataoiut (~36 AR, Section 10); the Restoration is where it sets like concrete. Hefu's reign is where a violent reversal stops being one man's edict and becomes the empire's permanent legal order — and then, across generations, the thing

nobody questions. By the end of the era a person can be born, live, and die without ever knowing the world was once matriarchal. That's a darker victory than the terror itself.

-  **The Circle is rebuilt as a crown-controlled state church — a Gallican settlement (locked).** Goteivati *crushed* the Circle of Eternal Light (Section 10, Article II). The Restoration doesn't restore its independence — it rebuilds the faith as an arm of the throne, a state church under the emperor (the Gallican / Louis-XIV model, where the crown controls the clergy and one faith is imposed by royal will, like the revocation of the Edict of Nantes). The breakaway **Order of the Pure Ones** is absorbed into the new orthodoxy or outlawed as a rival. Religion comes back, but on the emperor's leash.
-  **The Solisian Academy is *transformed* here, not *founded* (timing fix; locked).** Canon describes the Academy as having begun "chiefly a school for adolescent nobility" that "later transformed into the empire's formal magical-education infrastructure." That transformation belongs *here* — the Restoration is when Goteivati's fearful magic registry (Article VII) is rebuilt into a permanent institution. Do **not** write the Academy as newly founded in this era; it already existed and is being repurposed.
-  **Two renamings belong to Crandona's Era, not the Restoration (don't double-count).** Search confirms **Vikitsv** → **Theolisseia** and the old **Aicruan dynasty** → **Tanan Grand Duchy** are dated to **Crandona's Era**. Anchor those renamings there; the Restoration's job is institutional hardening (law, church, academy), not the map-renaming, which has its own home.

Worldbuilding critique (Restoration)

- **Don't let the overthrow happen offstage.** "Goteivati is deposed" is a sentence; the *toppling of a god-emperor* is a decade. Who moves against him — the old matriarchal houses he gutted, a faction of his own conscripted mages, the army? A tyrant that total doesn't fall to a palace knife; he falls to a coalition that has finally decided the cost of obedience is higher than the cost of revolt. Dramatize the math.
- **Reyqe Bahsi is your engine — play her like Maintenon / Kösem.** A mistress who outlasts the tyrant and then puts *her own bastard* on the throne is one of the best pieces of court drama in the whole project. She's not a footnote to

Hefu; she's the architect of him. Give her the regency-mother arc — the woman who survived sharing a monster's bed, kept her son alive through the overthrow, and out-maneuvered every trueborn claimant to crown a bastard. House Bahsi rising from "the mistress's house" to the imperial dynasty is a *Magnificent Century* spine.

- **The Sun Court has to *cage*, not just glitter.** Versailles wasn't pretty for its own sake — it was a trap that turned dangerous warlords into courtiers fighting over who hands the emperor his shirt. Show the old houses losing their teeth at court: a duke who once held an army now holds a ceremonial title and a room near the throne. And remember your own rule — peace still has skirmishes: faction wars, proxy intrigues, mistresses and ministers knifing each other for the Sun King's ear.
- **The quiet horror is the generation that forgets.** The most chilling beat of this era isn't a purge — it's a young noblewoman in ~350 AR who has *never heard* that women once ruled, who thinks the Pataoiut is simply nature. Goteivati made the terror; Hefu's Restoration makes it *normal*. Land that and the era earns its place.

Material culture — Louis XIV's France (~1643–1715)

Grounded in cited Sun-King practice (Versailles, Colbert's mercantilism, the Code Louis, the revocation of the Edict of Nantes), then adapted — carrying the matriarchy→patriarchy inversion (Section 10) into its permanent, gilded form. Redirect any anchor that doesn't fit.

- **Clothing & fashion.** Real France: the **king set fashion for a continent** — the *justaucorps*, towering *perruque* wigs, and **red heels reserved by royal favor** (you literally could not wear them without the king's blessing). Dress was a map of *nearness to the throne*. *Adapt:* the Sun Court turns clothing into a favor-economy — the rank-dyes and insignia that ran through the *female* line under Matsiali (Section 8) are now permanently reassigned to men under the Pataoiut, and a courtier's wardrobe broadcasts exactly how close they sit to Emperor Hefu.
- **Food & cuisine.** Real France: the ***grand couvert*** — the king dining **in public as theater**, watched by a ranked audience — and the birth of *haute cuisine* as court spectacle. *Adapt:* imperial public dining becomes a ceremony of rank;

who is permitted to watch the emperor eat, and from how near, is a measurable unit of standing — the Sun Court's pecking order made edible.

- **Architecture.** Real France: **Versailles** — a palace built less to live in than to **cage the nobility in gold**, with Le Nôtre's controlled gardens and the Hall of Mirrors as propaganda. *Adapt:* Hefu raises a new **sun-palace** on land Goteivati seized from the temples (Section 10) — the Razar sun-imagery, once the Circle's, now glorifying the Sun King himself; the great houses are summoned to live inside it, where the throne can watch them.
- **Weapons & military tactics.** Real France: **Louvois's professional standing army** (the largest in Europe), **Vauban's star-fortresses and scientific siege-craft**, war run as a state enterprise. *Adapt:* the standing imperial army settles into a permanent, emperor-loyal force; Goteivati's **registered "gifted" (Article VII) are institutionalized into a state magical corps** — the Solisian Academy *transformed* into the pipeline that trains and assigns them; war becomes managed and bureaucratic, fought at fortified frontiers rather than in the heartland.
- **Legal systems.** Real France: **"l'état, c'est moi"** absolutism, the codifying **Grand Ordonnances (the Code Louis, 1667–1670)**, and **intendants** enforcing royal law in every province over local lords. *Adapt:* this is where the **Pataoiut is codified** — the gender inversion written permanently into civil law (marriage, inheritance, property, office), and intendant-style royal agents replace whatever local matriarchal authority survived. Law is how the terror becomes irreversible.
- **Trade goods & economy.** Real France: **Colbert's mercantilism** — state manufactures, luxury exports (silk, glass, mirrors), tax farming, roads and canals built to enrich the crown. *Adapt:* imperial mercantilism funds the Sun Court's gold; the **Rern**, reset after the Dark Ages, is restabilized into a hard currency again; the once-suppressed magic trade is brought fully under **state license** — taxed, monopolized, and profitable.
- **Funeral & death customs.** Real France: royal burial at **Saint-Denis**, the cry **"le roi est mort, vive le roi"** (the throne never dies), and the doctrine of the king's two bodies. *Adapt:* a new **imperial necropolis** for the Patton-Bahsi line, and a continuity doctrine that papers over the *bastard origin* — official rites insisting

Hefu's crown is unbroken and god-given, so the throne can never be seen to have passed through a mistress's son.

- **Daily life.** Real France: the **levée** (nobles competing for the honor of attending the king's morning rising), **etiquette as the instrument of control**, and **royal mistresses as real power-brokers** (Montespan, then Maintenon). *Adapt:* the Sun Court's suffocating etiquette is the cage; **Lady Reyqe Bahsi is your Maintenon** — the mistress who became the power behind the throne; nearness to Emperor Hefu is the only currency that matters; and the matriarchy is now something the old families *remember in private and deny in public*.

✓ Fix — subdivide the ~350 years into a five-phase arc

The recovery from Goteivati, walked from the overthrow to the threshold of the Long Stability. Scaffolding to fill with named reigns and crises as we build, spending Fix 4's friction list.

Phase	Span (approx.)	What defines it
I · The Tyrant Toppled	~50 – 80 AR	The coalition that finally ends Goteivati — old matriarchal houses, disaffected mages, and the army deciding obedience costs more than revolt. The Damned is overthrown and deposed by force; the empire is left victorious but leaderless.
II · The Bastard Crowned	~80 – 130 AR	Lady Reyqe Bahsi maneuvers her son Hefu Bahsi past every trueborn claimant and onto the throne as Emperor Hefu Patton . A legitimacy war over a bastard's right to rule; House Bahsi rises from the mistress's house into an imperial dynasty.
III · The Sun Court Rises	~130 – 230 AR	Absolutism perfected. Hefu becomes the Sun King ; a Versailles-analog sun-palace cages the great houses; the Pataoiut is codified into permanent law . The warlords become courtiers fighting over ceremony.
IV · The Gilded Settlement	~230 – 330 AR	The institutions set. The Circle is rebuilt as a crown-controlled state church (Gallican settlement); the Order of the Pure Ones is absorbed or outlawed; the magic registry is institutionalized — the Solisian

Phase	Span (approx.)	What defines it
		Academy *transformed • into the empire's formal magical-education corps.
V · Into the Long Calm	~330 – 400 AR	The gilded order stops being policy and becomes common sense — a generation that no longer remembers the matriarchy. The Pataoiut is simply "how things are." The settled, ossifying peace carries straight into the Long Stability.

LOCKED — Section 11 (The Restoration, ~50–400 AR). (a) Anchor: **Louis XIV's France / the Sun King**. (b) Goteivati "the Damned" is **overthrown and deposed** — the terror ends by force, not by a natural death. (c) Succession: his **bastard son Hefu Bahsi** is crowned **Emperor Hefu Patton**, installed by his mother **Lady Reyqe Bahsi of House Bahsi** (Goteivati's long-time mistress) — and it is **Hefu, not Goteivati, who is the Sun King**. (d) The **Pataoiut institutionalizes** here: decree → permanent law → common sense. (e) The shattered **Circle of Eternal Light** is rebuilt as a **crown-controlled state church under the emperor** (Gallican settlement); the **Order of the Pure Ones** is absorbed or outlawed. (f) Timing flags: the **Solisian Academy is transformed, not founded** here; the renamings **Vikitsv → Theolisseia** and **Aicruan dynasty → Tanan Grand Duchy** belong to **Crandon's Era**. (g) The ~350 years are subdivided into the five-phase arc above.

12 · The Long Stability (~400 – 1,326 AR)

Pairs with: TIMELINE, ERA'S REFERENCE, House Patton, The Solisian Academy, Magic System, Religion, KEY WORDS AND TERMS

Real-world anchors (this era). The ~926 years of the Long Stability map cleanly onto **Song Dynasty China (960–1279 CE)** — the empire at its most prosperous, most bureaucratic, and most quietly brittle. Song China gives you the whole kit: a **civil examination system** that makes merit (on paper) the path to power, **printing and encyclopaedias**, explosive growth in **trade, porcelain, and silk**, **Neo-Confucian philosophy** that hardens patriarchal family hierarchy into cosmic law, and — crucially — the era when **footbinding** becomes normalized among the elite, a physical enforcement of female immobility that maps directly onto your Pataoiut. Song China looks like a golden age in every chronicle and feels like a cage from inside. The Long Stability is where the Solisian Empire writes its most beautiful poetry while slowly building the scaffold for the Blood Trials. Supplement with **Byzantine middle period** (Macedonian dynasty, ~867–1056 CE) for the empire's administrative machinery and its managed relationship with religion — a church that is powerful but leashed.

What this era actually is

The Long Stability is not a golden age. It is what a golden age looks like when you forget that the floor was laid in blood.

Coming out of the Restoration's gilded settlement, the empire enters the longest unbroken peace in its history — nearly a thousand years without a succession war, without a continental collapse, without another Goteivati. The **Sun Court model** entrenched by Emperor Hefu hardens into administrative genius: a professional civil examination system, a merit-ladder that anyone with enough Rern and the right bloodline (male) can climb, and a **Solisian Academy** now operating as the empire's most prestigious institution, sorting and licensing every mage in the six kingdoms. Trade flourishes. Architecture reaches new heights. Philosophers produce the era's defining Neo-Pataoiut texts — elaborate, beautiful arguments for why the world has always been this way and always should be.

The **Pataoiut is not a law anymore. It is gravity.** No one in ~800 AR is debating it. The women who remember the matriarch's world are ten generations dead. What remains is the smooth institutional surface: inheritance through the male line,

property in male hands, women educated only in domestic arts and religious observance under the crown-controlled Circle, the Solisian Academy's intake list a roster of sons.

And underneath that smooth surface: **the magic registry keeps running**. Article VII's great ledger, transformed by the Restoration into the Academy's institutional backbone, has now been recording magical inheritance across generations for centuries. The data is accumulating. And it keeps showing something that the Pataoiut's obsession with lineage purity cannot explain away forever: **children whose magical abilities do not match their fathers'**. For most of the Long Stability, the Academy's scholars file these mismatches under "natural variance" and move on. But the Pataoiut's logic does not allow for natural variance in lineage. If a son's magic is wrong, the lineage is wrong. If the lineage is wrong — *someone is lying about the father*.

That slow leak of paranoia is the Long Stability's real story. The Blood Trials do not erupt in 1,326 AR by accident. They are the result of ~900 years of a registry that was never meant to be used as a paternity test, run through an ideology that was never meant to encounter ambiguity in bloodlines.

/ **Canon conflicts & errors landing in this era**

-  **The Blood Trials' precondition is built here — ignition is a slow century of regional burnings (locked).** The TIMELINE confirms the Blood Trials begin at 1,326 AR and that Great Mage Takar's 1,528 discovery proved *"the likelihood of inheriting a parent's magical level is only 40%."* The persecution does **not** begin with a single high-profile accusation — it begins as local, deniable, regional killings across Phase V (~1,200–1,326 AR) that slowly harden into empire-wide doctrine. There is no founding villain, only a *system* that stops needing one. By 1,326 what began as a hundred separate cruelties in a hundred separate provinces has simply become *how things are done*. The horror is that no one person decided it.
-  **The Order of the Pure Ones is truly gone by the Long Stability (locked).** Absorbed or destroyed at the Restoration (~400 AR), the Pure Ones do not survive into this era in any form — underground, rural, or otherwise. By 400 AR the crown-controlled Circle of Eternal Light is the only permitted faith in the empire, and the Pure Ones' tradition has been extinguished completely. This is

a meaningful distinction from earlier eras: the Massacre of Light (~8,558 BR) failed to destroy them; the Restoration succeeded where the massacre didn't, because a state church is a more thorough instrument than a purge.

-  **The Solisian Civil Examination is legally restricted to noble sons (locked).** Unlike Song China's theoretically open keju, the Solisian exam is **legally closed to commoners** — only sons of recognized noble houses may sit it. This means the Long Stability has no commoner-to-bureaucrat pipeline: the merchant class that grows wealthy in Phase III–IV has money but *no political access*, full stop. That blocked door is the era's core social pressure. By 1,200 AR, merchants wealthy enough to buy three noble houses are still barred from the exam, from the Academy's senior ranks, and from any imperial post. When the Blood Trials begin, the merchant class has every reason to let the nobility burn.
-  **No Pataoiut reforms land in this era — don't double-count.** The empire's reform wave comes much later: the Age of Reforms (§14, ~1,528–1,852), capped by **Astyan II's reforms ~1,852 AR**. The Long Stability's Pataoiut is unreformed and unchallenged. Any apparent softening here is cultural aesthetic, not structural change.
-  **The Solisian Academy's name is now stable (no renaming needed here).** The Academy was already transformed in §11. The Long Stability is simply the era when it operates at full institutional capacity — producing generations of licensed mages, running the registry, and functioning as the empire's most prestigious school. Crown of Glory confirms it is still operating in 2,632 AR; everything in this era should treat it as a permanent, prestigious, and increasingly conservative institution.

Worldbuilding critique (Long Stability)

- **"Stability" is not "happiness" — show the texture of what ~900 years of Pataoiut normal actually feels like.** The most important thing this era can do is give readers the lived reality of the world your books will portray as background. The women of Crown of Glory were born into a world that has been patriarchal for over two *thousand* years by their time. The Long Stability is the era that makes that feel bone-deep rather than recently imposed. Show us one generation that has grandmothers who still remember secret

matriarchal prayers — and then show us three generations after that, where no one does.

- **The magic registry is your Chekhov's gun.** ~900 years of data means ~900 years of mismatches quietly filed away. The scholar who first notices the pattern, the administrator who suppresses it, the noble house that weaponizes it — whoever lights the fuse of the Blood Trials is one of the most important unnamed characters in your entire world. Give them a face, even if just in the fixes doc.
- **A thousand-year peace has its own violence.** The Long Stability doesn't mean no wars — it means no *existential* wars. Border skirmishes with Theolisseia (ex-Vikitsv), proxy conflicts in the Tanan Grand Duchy, internal noble house grudge-matches, the occasional failed succession — all of these can run through the era while the macro-stability holds. "Stability" at the empire level means instability at the house level is how ambition vents itself.
- **The Neo-Pataoiut philosophical tradition is your Song Neo-Confucianism.** Someone in ~600–800 AR writes the masterwork that synthesizes Goteivati's brutal decrees into an elegant, almost beautiful philosophical system. This text (give it a title) becomes the curriculum of every educated person in the empire — and the intellectual framework through which the Blood Trials will be *justified* when they come. The man who writes the book that enables the massacre is one of the era's most chilling figures.

Material culture — Song Dynasty China (960–1279 CE) + Byzantine administrative layer

Grounded in cited Song-era practice, then adapted to the Pataoiut patriarchal inversion and the empire's sun-worship religion.

- **Clothing & fashion.** Real Song: **layered silk robes** with rank-coded color and pattern, scholar-officials in distinctive hats, and — most critically — **footbinding** spreading through the elite as a beauty standard and status marker (bound feet = a woman who cannot work, therefore a man wealthy enough to support her). *Adapt:* Solisian elite women adopt a fashion analog to footbinding — some physical or sartorial restriction that signals their family's Pataoiut piety and their husband's status. A noblewoman in 800 AR who

moves freely is advertising that her husband is poor. The restriction is the luxury.

- **Food & cuisine.** Real Song: **restaurant culture** explodes in cities like Hangzhou — printed menus, specialized stalls, street food for all classes, tea culture as social ritual. *Adapt:* The imperial capital develops a sophisticated urban food economy; tea (or the world's equivalent) becomes the Long Stability's social lubricant — the ceremonial drink of scholars, the medium of political conversation, the thing you offer a guest before you negotiate. The emperor's table remains theatrical (§11's *grand couvert* tradition persists), but now the *streets* are also theater.
- **Architecture.** Real Song: **pagoda-style towers, wooden bracket architecture, garden design** as a philosophical art form (the scholar's garden as meditation on order and nature), and the first use of **gunpowder in warfare** (fire-arrows, bombs). *Adapt:* The Long Stability's architecture is the era when the empire builds for permanence and beauty rather than defense and fear. Sun-imagery is everywhere but refined — not Goteivati's brutal iconography, but elegant solar geometry in tile, window, and garden design. The great noble houses build **demonstration gardens** that are as much political statements as aesthetic ones.
- **Weapons & military tactics.** Real Song: **professional standing armies** (not conscripts), **early gunpowder weapons, naval power** on river systems, and a military that is technically sophisticated but perpetually underfunded because the civil examination system devalues military careers. *Adapt:* The Long Stability's empire has a professional army and a licensed magic corps (Academy graduates), but nearly a thousand years without an existential war produces institutional rot. By 1,200 AR the imperial military is impressive on paper and slow in practice — a problem that will matter when the Blood Trials' chaos begins.
- **Legal systems.** Real Song: the **civil examination system** (keju) as the backbone of governance — years of memorization, public exams, ranked placement into bureaucratic posts. In theory open to all males; in practice accessible mainly to those wealthy enough for years of study. *Adapt:* The Long Stability codifies the **Solisian Civil Examination** — a rigorous test that determines placement in the imperial bureaucracy, the Academy's senior

ranks, and provincial governance. It is technically open to any free male subject. In practice, a family needs three generations of wealth to produce a son who can pass. The exam *feels* like meritocracy. It *functions* like inherited privilege with extra steps.

- **Trade goods & economy.** Real Song: **printed paper money** (jiaozi), **long-distance maritime trade**, **porcelain and silk as export luxury goods**, **urban commercial class rising** alongside the landed aristocracy. *Adapt:* The Long Stability is when the **Rern** becomes fully paper-based — printed currency backed by imperial guarantee. A merchant class grows in the major cities, accumulating wealth outside the noble house system. By 1,000–1,200 AR, the wealthiest merchants in the capital are richer than minor noble houses, and they are *not* invited to court. That tension — new money, old blood, and the exam system caught between them — is the social pressure cooker the Blood Trials will crack open.
- **Funeral & death customs.** Real Song: **ancestor veneration** as the core of family religion, elaborate tomb goods, the belief that the dead can be honored or offended by the living's behavior. *Adapt:* The Long Stability's Pataoiut ancestor cult becomes the era's dominant popular religion — distinct from the crown-controlled Circle, lived in the home rather than the temple. Every household maintains a **patrilineal ancestor shrine**: tablets for the male dead, prayers for their blessing, and a theology in which a family's magical inheritance is understood as the ancestors' gift. When a child's magic doesn't match the shrine's lineage — the theology itself calls it a desecration.
- **Daily life.** Real Song: **urban literacy rising**, **printed books** circulating for the first time to non-elites, **tea houses as civic space**, **foot-bound women** running sophisticated household economies from within their domestic sphere. *Adapt:* The Long Stability is the empire's most literate era. Printed texts of the Neo-Pataoiut philosophical canon reach every literate household. The **Solisian Academy's published registry standards** are available to any educated person — which means any educated person can also read the inheritance tables and draw the same conclusion the scholars have been suppressing for centuries. Literacy is what eventually makes the Blood Trials *systematic* rather than local: it's the first persecution in history where the accusers can cite a published standard.

✓ Fix — subdivide the ~926 years into a five-phase arc

The long peace, walked from the gilded settlement through to the threshold of the Blood Trials. Scaffolding to fill with named reigns and crises as we build.

Phase	Span (approx.)	What defines it
I · The Golden Administration	~400 – 600 AR	The civil examination system is formalized; the Solisian Academy reaches full institutional maturity; the empire's bureaucratic machinery becomes the most sophisticated it has ever been. The Pataoiut is simply the world. No living person has a grandmother who was matriarch. Commerce expands; the Rern stabilizes.
II · The Philosophical Century	~600 – 800 AR	The era's great Neo-Pataoiut thinkers write the texts that will define empire-wide ideology for the next thousand years. One masterwork synthesizes Goteivati's brutal decrees into an elegant philosophical system; it becomes the examination curriculum. The magic registry's mismatches are first formally documented — and formally suppressed.
III · The High Stability	~800 – 1,000 AR	Peak prosperity. Urban merchant class rising. Printed currency and long-distance trade at their height. The imperial military is technically excellent and never tested. The crown-controlled Circle of Eternal Light is at its most culturally dominant. Minor border wars (Theolisseia, Tanan Grand Duchy) vent noble ambition without threatening the core.
IV · The Slow Rot	~1,000 – 1,200 AR	Structural cracks widen invisibly. The civil examination system calcifies into inherited privilege. Merchant wealth rivals noble blood and has no political outlet. The magic registry's suppressed mismatches accumulate across multiple great houses. The military atrophies. A series of competent but unremarkable emperors maintain peace by avoiding decisions.
V · The Kindling	~1,200 – 1,326 AR	The first regional Blood Trial accusations begin — local, unofficial, deniable. A high-profile noble house uses mismatch data to destroy a rival family, calling the mother a <i>Blood Whore</i> . The empire watches and

Phase	Span (approx.)	What defines it
		does not stop it. By 1,326, what began as a weapon in one factional fight has become doctrine. The Blood Trials begin in earnest.

LOCKED — Section 12 (The Long Stability, ~400–1,326 AR). (a) Anchor: **Song Dynasty China** (960–1279 CE) + Byzantine administrative layer. (b) The era is the empire's longest unbroken peace — prosperous, bureaucratic, and quietly building toward catastrophe. The **Pataoiut** is no longer a law; it is gravity. (c) The **Solisian Civil Examination** is **legally restricted to noble sons** — commoners are barred entirely; a growing merchant class accumulates wealth with zero political access. (d) The **Order of the Pure Ones is truly gone** — extinguished at the Restoration, not surviving in any form into this era. (e) The **magic registry** accumulates ~900 years of inheritance mismatches that the Academy's scholars file under "natural variance" — until the Pataoiut's lineage logic makes that impossible to sustain. (f) **Blood Trials ignition is a slow century of regional burnings (~1,200–1,326 AR)** — no founding villain, no single accusation; just a hundred separate cruelties in a hundred provinces hardening into doctrine. (g) The Neo-Pataoiut philosophical masterwork (written ~600–800 AR) is **TBD** — name the philosopher when ready. (h) The ~926 years are subdivided into the five-phase arc above.

13 · The Blood Trials (~1,326 – 1,528 AR)

Pairs with: TIMELINE, ERA'S REFERENCE, Magic System, House Patton, The Solisian Academy, KEY WORDS AND TERMS

Real-world anchors (this era). The Blood Trials map onto two interlocking real-world periods: **the European witch trials (~1450–1750 CE)** for the mechanism of persecution (gendered accusation, burning and drowning as execution, community denunciation, spectral/magical "evidence," and the way accusation itself became proof), and **the Spanish Inquisition's bureaucratic apparatus** for the institutional machinery (formal trial procedures, documented registers of the accused, official classification of the condemned). The scale — at least **one million documented victims** over 200 years — pushes beyond the witch trials and into something closer to **the Holocaust's bureaucratic logic**: a literate, administratively sophisticated society that kept careful records of who it was killing and why, and called it justice. The horror is not that the empire went mad. The horror is that it remained perfectly *orderly*.

What this era actually is

The Blood Trials are not a breakdown of civilization. They are civilization working exactly as the Long Stability built it to work, pointed at the wrong target.

The mechanism is simple: a child's magical abilities do not match their father's registered profile in the **Solisian Academy's inheritance ledger**. Under the Pataoiut, the only possible explanation is that the mother was unfaithful — a **Blood Whore**, in the era's official terminology, who has poisoned the family's sacred male lineage with foreign blood. The mother is branded with the letters **B.W.** and executed — burned or drowned depending on province. The child is killed. The father's honor is restored. The house's registry is corrected.

What no one in 1,326 AR knows, and what the Academy's scholars have been quietly suppressing since Phase II of the Long Stability, is that **a child only has a 40% chance of inheriting a parent's magical level**. The mismatch is not evidence of infidelity. It is simply how magic works. Great Mage **Takar** will prove this in 1,528 AR and end the Trials overnight — but by then, the TIMELINE records at least **400,000 women and 600,000 children** have been killed in documented cases alone, with countless more undocumented.

The Blood Trials are an atrocity built on a mathematical misunderstanding, sustained for two centuries by an ideology that could not allow the alternative explanation to be true, and ended not by a revolution but by a **single scholar's proof**. The empire did not change its values to end the Trials. It simply discovered it had been wrong about the facts.

● / ● Canon conflicts & errors landing in this era

- **The documented death toll is canon and must not be softened (locked from TIMELINE).** Your TIMELINE records the figures explicitly: **400,000 women** and **600,000 children** killed in documented cases, with the text noting "countless more undocumented." Total documented dead: **1,000,000+**. This is not a figure to qualify or minimize — it is the canonical weight of this era. Any scene, description, or era overview that treats the Blood Trials as a minor historical footnote is in error.
- **The execution methods are canon: burning or drowning (locked from TIMELINE).** Both methods are explicitly recorded. Province-to-province variation in method is built into canon already — use this as worldbuilding texture (burning in the capital's more "formal" court system; drowning in rural provinces where wood is scarce or the river is the local instrument of justice).
- **The brand "B.W." (Blood Whore) is canon and is applied to noble mothers (locked from TIMELINE).** The phrasing is explicit: "Noble mothers were branded 'B.W.' (Blood Whore)." This means the branding is specifically a *noble* practice — the formal, bureaucratic version of the accusation, applied to women of rank before their execution. Common-born women may be killed without the formal branding; noble women get the registry update and the mark.
- **Great Mage Takar ends the Trials in 1,528 AR with a proof, not a war (locked from TIMELINE).** Takar's discovery is framed as scientific: a demonstration that the 40% inheritance rate is the true figure, destroying the false premise of the Trials. The Trials end **because the factual basis collapses**, not because of a political uprising, a military campaign, or a reformist emperor. This is both the era's most important fix and its most chilling implication: the empire was perfectly willing to stop once it was shown it had been wrong. It did not require moral reform. It required a correction.

- **Takar is a commoner outsider who worked the math independently (locked).** Not an Academy insider — a **commoner** who, thanks to the Long Stability's literacy culture and the Academy's *published* registry standards (§12), accessed the publicly available inheritance data and worked the 40% proof from outside the institution entirely. This is the most damning version: the truth was sitting in published documents the whole time, and it took someone *outside* the noble-and-scholar machine to actually read it honestly. The empire's own institutions had every tool to stop the Trials for two centuries and never did; an outsider with no stake in protecting the registry's mythology did it alone. The title "Great Mage" is earned *after* the proof, not a sign of prior standing. ? (Still open when you want it: Takar's gender, name origin, home province, and what becomes of Takar after 1,528.)
- **The Academy is passively neutral — it supplies the data and washes its hands (locked).** The Academy does **not** run the prosecution and does **not** mount internal resistance. It simply does what it has always done: maintain the registry and make the inheritance data available. The accusations, tribunals, and executions are the work of provincial magistrates and accusing houses — the Academy just *provides the ledger they cite*. This is the most morally damning posture precisely because it feels innocent from the inside: "We only keep the records. What others do with them is not our concern." The Academy's neutrality is what lets a million people die without a single scholar feeling like a murderer. And it is why Takar — a **commoner outsider** — had to be the one to act: the institution that held the truth had decided, as policy, that the truth was not its responsibility.
- **The emperor(s) during the Blood Trials — TBD (left open by your ruling).** No named ruler covers this period yet, and you've chosen to leave the throne unnamed for now. Working assumption until you fill it: the throne **does not interfere** — a non-decision that is itself a decision, the catastrophic payoff of the Long Stability's habit of emperors who maintain peace by avoiding decisions. The Blood Trials run for 200 years partly *because* no emperor is willing to spend the political capital to stop a system every noble house is using against its rivals. Name the reign(s) when ready; the era's shape doesn't depend on it.

Worldbuilding critique (Blood Trials)

- **The bureaucracy is the monster, not any individual.** The most important thing to establish is that the Blood Trials were *orderly*. There were formal accusations, formal trials, formal records of execution, and formal correction of the house registry afterward. A woman was killed with paperwork. Her child was killed with paperwork. The empire's civil examination system — the Long Stability's proudest achievement — trained the clerks who processed the death warrants. Show the machinery, not just the flames.
- **The suppressed scholars are your Greek chorus.** Someone in Phase II (~600–800 AR) formally documented the 40% figure and was suppressed. That document exists somewhere in the Academy's archive. The Blood Trials are 200 years of people dying because a piece of paper in a locked room was never allowed to be read. The scholar who wrote it, the administrator who buried it, and the archivist who kept it alive in secret are three of the era's most important figures.
- **The merchant class watches and does not intervene.** The Long Stability established that wealthy merchants are locked out of the noble exam system and have no political access. During the Blood Trials, the persecution falls almost entirely on noble families — because only noble women are formally branded B.W. and brought before the Academy's machinery. Common-born women are killed locally and informally. The merchant class, wealthy and politically excluded, watches the nobility burn itself from a safe distance. Some of them are paying for the firewood. That complicity is part of the era's moral texture.
- **Takar's proof needs to be *undeniable*.** The Trials end in 1,528 because Takar produces something the Academy cannot dismiss — not an argument, but a demonstration. What does that demonstration look like? One possibility: Takar isolates a large enough sample of families with *both* parents' full registry profiles and shows that even in cases where fidelity is beyond doubt (e.g., couples who have been sequestered, monitored, or magically verified), the 40% mismatch rate holds constant. The proof doesn't accuse the empire of murder. It simply makes the accusation *impossible* going forward. That distinction — the empire never has to admit it was wrong, only that it was mistaken — is why the Trials end cleanly.

Material culture — European witch trials (~1450–1750) + Inquisitorial apparatus

Grounded in cited historical practice, then adapted to the Pataoiut patriarchal system and the Solisian Empire's institutional sophistication.

- **Clothing & fashion.** Real witch-trial era: **mourning dress** as the expected costume of the accused's surviving family; public **penitential garb** for those who confessed to lesser charges; the **red letter / branding mark** as permanent social stigma. *Adapt:* Noble families with a B.W. execution in their recent history face social ruin — their sons are barred from the civil examination for one generation, their daughters' marriage prospects collapse. The brand is not just on the executed woman's skin; it stains the house's registry entry for decades.
- **Food & cuisine.** Real era: **feast/fast cycles** tied to religious calendar, **prison rations** as punishment before execution, the **public meal** after an execution as civic ritual (the crowd watches the burning and then goes to a market). *Adapt:* Executions in the imperial capital are scheduled on Circle holy days — the state church's calendar becomes the calendar of death. A woman condemned in spring is executed at the Razar midsummer festival, her burning framed as an offering to the sun god whose lineage her faithlessness supposedly defiled.
- **Architecture.** Real era: **purpose-built trial halls** in major cities, **prison architecture** designed for pre-execution detention, **public burning grounds** as permanent civic infrastructure. *Adapt:* The Long Stability's demonstration gardens (§12) are now surrounded by **registry halls** — imposing bureaucratic buildings where Academy clerks process accusations, cross-reference the ledger, and issue execution orders. The beauty of the Long Stability's architecture now frames the machinery of the Trials.
- **Weapons & military tactics.** Real era: **no military conflict** — the persecution is entirely juridical. The empire's atrophied military (§12's "slow rot") is irrelevant here; the Blood Trials are conducted by clerks and executioners, not soldiers. *Adapt:* The imperial army's institutional rot deepens during the Blood Trials, since the officer class is also subject to accusation (a general whose son's magic doesn't match his profile can be ruined overnight). Military families begin quietly falsifying registry entries — the first systematic corruption of the ledger.

- **Legal systems.** Real era: the **Malleus Maleficarum** as the procedural handbook, **inquisitorial tribunals** with a presumption of guilt, **spectral evidence** as admissible (the accused's "magic" as proof of the crime), and the use of **torture** to extract confessions that implicate others. *Adapt:* The **Academy's registry** functions as the Malleus — a published, authoritative document that defines the crime and the standard of proof. The tribunal is the Academy's provincial magistrates. The "spectral evidence" is the mismatch in the ledger. Torture is not recorded as official policy but is not recorded as prohibited either.
- **Trade goods & economy.** Real era: **property confiscation** as a financial incentive for accusation (the accuser or the crown receives a portion of the condemned's estate), **market disruption** from noble house collapses, **economic depression** in regions hit hardest by Trials. *Adapt:* Noble house collapses during the Trials create a windfall for the merchant class — seized estates, disrupted trade routes, and desperate heirs selling titles. The politically excluded merchants of the Long Stability begin, quietly, to accumulate the land and assets the nobility is losing. By 1,528, when the Trials end, the wealth distribution of the empire has shifted measurably.
- **Funeral & death customs.** Real era: **denied burial** for the executed (burning leaves no body to inter; drowning victims are sometimes not recovered), **desecrated graves** of those posthumously condemned, **survivor shame** making public mourning impossible. *Adapt:* A noble family with a B.W. execution cannot hold a formal funeral. The executed woman's ancestor shrine — the Long Stability's domestic religion — is dismantled; her tablets are destroyed. The living members of the family are expected to participate in her erasure as proof of their own loyalty. Mothers are mourned in secret, in the dark, with no tablet and no prayer.
- **Daily life.** Real era: **neighbor-against-neighbor denunciation** as the primary accusation mechanism, **social paranoia** destroying community trust, **children trained to report suspicious behavior** in their own households, and the **quiet complicity** of people who know the accused is innocent but say nothing. *Adapt:* The Blood Trials make the Long Stability's patrilineal ancestor shrine into a trap: every household now lives with the knowledge that their own registry entry is one mismatch away from an accusation. Fathers quietly

commission private registry audits. Mothers educate their daughters in how to behave if accused. The empire is prosperous, orderly, and absolutely terrified.

 Fix — subdivide the ~202 years into a four-phase arc

The persecution, walked from first doctrine to Takar's proof. Scaffolding to fill with named cases and named emperors as we build.

Phase	Span (approx.)	What defines it
I · The Doctrine Hardens	~1,326 – 1,380 AR	What began as informal regional killings in Phase V of the Long Stability is formalized by imperial decree. The Academy's registry is officially deputized as the prosecution instrument. The term " Blood Whore " and the B.W. brand enter official imperial law. The first documented empire-wide execution figures are recorded.
II · The Height of the Trials	~1,380 – 1,460 AR	Peak persecution. Accusations cascade — houses weaponizing the Trials against rivals, provincial magistrates competing on execution counts, and a generation of noble children growing up knowing that a bad registry result means their mother's death. The documented toll climbs fastest here. The Academy's internal dissenters are quietly removed.
III · The Cracks	~1,460 – 1,510 AR	Systemic rot becomes visible. Military registry falsification is widespread. Merchant land acquisition from collapsed noble estates is alarming to the crown. A small number of provincial magistrates begin quietly declining to process accusations. Takar begins the work that will end the Trials — accessing the Academy's buried archive.
IV · Takar's Proof	~1,510 – 1,528 AR	Great Mage Takar presents the demonstration that the 40% inheritance rate is structural and universal. The Academy cannot dismiss it. The imperial decree formalizing the Trials is quietly repealed. No emperor publicly admits the empire was wrong. The executions simply stop — and the empire moves on, as it always has, without reckoning.

LOCKED — Section 13 (The Blood Trials, ~1,326–1,528 AR). (a) Anchors: **European witch trials** (mechanism) + **Spanish Inquisition** (apparatus) + **Holocaust bureaucratic logic** (scale and orderliness). (b) Canon toll (from TIMELINE) is firm: **400,000 women + 600,000 children** documented dead, countless more undocumented — never to be softened. (c) Mechanism: a child's magic fails to match the father's **registry** profile → the mother is branded **B.W. (Blood Whore)** and executed (**burning or drowning** by province), the child killed. (d) The truth — a **40% inheritance rate** — was documented and suppressed back in Long Stability Phase II. (e) **Takar is a commoner outsider** who worked the proof from *publicly published* registry data, alone, from outside the institution. (f) The **Academy is passively neutral** — it supplies the ledger and disclaims responsibility for what magistrates and houses do with it. (g) The throne is **TBD**; working assumption is non-interference. (h) The ~202 years subdivide into the four-phase arc above.

14 · The Age of Reforms (~1,528 – 1,852 AR)

Pairs with: TIMELINE, ERA'S REFERENCE, House Patton, The Solisian Academy, Magic System, Religion, KEY WORDS AND TERMS, Name Evolution Across Eras

Real-world anchors (this era). Your spine ran the Sun Court (Louis XIV, §11) and the long bureaucratic peace (Song China, §12) straight into an atrocity (the witch-trial machinery, §13). The era that follows is its mirror image: the **European Enlightenment / Age of Reason (~1685–1815)**, tipping into the **Age of Revolutions** at the back end. The fit is almost mechanical. Takar didn't end the Blood Trials with an army or a prophecy — he ended them with a *measurement* (§13). That's the Scientific Revolution moment, the Newton's-*Principia* hinge that turns into Voltaire, Beccaria, and *sapere aude*. Once a single proof has overturned a thousand-year dogma about blood, every other inherited certainty is fair game. The Enlightenment hands you the whole kit: **salons and coffeehouses** as engines of debate, an explosion of **print, pamphlets, and journals**, the **social contract** and constitutional government, **separation of church and state**, the **abolition of judicial torture** (Beccaria), and reform movements that breed each other — abolitionism teaching women to argue for themselves. The Age of Reforms is where the empire finally has to live with what Takar proved.

What this era actually is

The era opens on a corpse-count and a correction, and not much else. Takar proved the 40% rate, the killing stopped, and the empire did what it always does — it moved on. No tribunal. No apology. A million dead women and children, and the official position was that the empire had simply been *mistaken* (§13, locked). You don't get to bury that and stay the same.

The Age of Reforms is the reckoning that 1,528 refused to deliver, arriving late and from below. The logic is simple and it's a slow-motion bomb: if the registry was wrong about inheritance, what *else* is the Pataoiut wrong about? Takar's method — reason, evidence, measurement over inherited authority — is the one tool the empire can't un-invent. It spreads from the registry to philosophy, from philosophy to law, from law to the throne. The Neo-Pataoiut masterwork that justified the whole order (§12) finally meets a generation that wants to see the proof.

But hold the line on what this era is *not*. It's not a revolution and it's not redemption. The Pataoiut bends here; it doesn't break. By the time of *A Crown of*

Glory (2,632 AR) the empire is still patriarchal to the bone, so whatever happens in the Age of Reforms has to stop short of liberation. A reform-minded emperor — **Astyan II** — reverses the *worst cruelties* of the Pataoiut — the B.W. statute, the harshest civil code from the Sun King's settlement — but the structure stays standing. The cage gets bigger and the bars get padded. Nobody opens the door. That's the honest, frustrating shape of reform: real enough to matter, partial enough to last.

● / ● Canon conflicts & errors landing in this era

- **Takar's proof is the era's hinge — it ends §13 and ignites §14 (locked from TIMELINE).** The same fact that stops the burning starts the questioning. The TIMELINE dates Takar's discovery to 1,528 AR, the exact boundary where the Blood Trials end and the Age of Reforms begins. Treat the proof as the era's founding event, not a footnote to the previous one: it's the empire's Scientific Revolution, and everything reformist downstream traces back to one commoner who read the ledger honestly.
- **The era closes in a reform settlement under Emperor Astyan II (~1,852 AR) — reverted to canon (locked).** The Age of Reforms ends with an enlightened-reformer settlement reversing the Pataoiut's worst cruelties under **Emperor Astyan II**, a Joseph-II / Beccaria-era figure spending political capital to roll back the cruelest machinery two centuries after Takar made it indefensible. This matches the live TIMELINE, the THE SIX KINGDOMS 8,900BR - 7,163 BR MAP, KEY WORDS AND TERMS, and Religion, all of which date Astyan II's reforms to **~1,852 AR** — *~780 years before Minara's era*. (This reverts an earlier draft ruling that had moved Astyan II to ~2,400+; it was based on a misread map heading and is now corrected.)
- **Astyan II's territorial renaming lands here too, at ~1,852 (locked).** Beyond the legal reforms, Astyan II's reign is when the empire's *third renaming* of territories into the Kingdom-of-[capital] scheme happens — the map the books inherit (Aicruae → Kingdom of Lajazer, Gherci → Kingdom of Tarmet, and so on). The THE SIX KINGDOMS 8,900BR - 7,163 BR MAP heading that once seemed to file Astyan II under "*Minara's era*" was misread; KEY WORDS AND TERMS and Religion both place his reforms *~780 years before* Minara, i.e. ~1,852. So §14 closes under Astyan II — legal reforms and the kingdom-renaming together — and nothing about him is deferred to a later era.

- **The civil examination cracks open — but only for money, not for the poor (locked).** The noble-only exam that defined the Long Stability (§12) finally admits commoners here — *partially*. Wealthy merchant families — rich, excluded for centuries, and now bankrolling the salons and the reform faction — buy their sons through the door, the price of access set just high enough. The poor stay exactly where they were. So the era's signature structural reform is real but class-bounded: it converts *money* into political access for the first time since the empire's founding, while leaving the commoner majority locked out. New money joins old blood at the table; everyone below them keeps standing.
- **The empire never calls the Blood Trials a crime — the official line stays "a mistake" forever (locked).** §13 ended the Trials as a factual correction, and the Age of Reforms refuses to upgrade that to a moral reckoning. No truth-and-memorial process, no state confession of mass murder. The official position is permanent: the empire was *mistaken*, not *guilty*. The moral verdict survives only in private grief and dissident print — the salon argument, the banned history, the tablet-less mourning that never becomes a state monument. This is the era's central cruelty: it legislates *around* the wound (repealing the B.W. statute, cutting the cruelest code) without ever naming it. A million dead, filed under a clerical error.
- **What becomes of the magic registry and the Solisian Academy? (open for your ruling).** The Academy supplied the ledger that powered the Trials and washed its hands of the result (§13, locked). **? Your ruling needed:** In the Age of Reason, is the Academy *reformed* (new oversight, the registry's paternity-test use outlawed), *humbled* (stripped of authority, its neutrality finally named as complicity), or does it simply *rebrand* — quietly recasting itself as the home of Takar's scientific method while never answering for the two centuries it enabled? The Academy is still operating in 2,632 AR, so it survives — the question is whether it survives *clean*.

Worldbuilding critique (Age of Reforms)

- **Reform isn't redemption — keep it partial and keep it cynical.** The trap is writing this as the empire's healing arc. Don't. The reforms land ~300 years after the first burning, and they land because they're useful to the people in power, not because the empire is sorry. The most honest beat in the era is an

old reform-era survivor's descendant getting a state apology that arrives ten generations too late, for a great-grandmother whose name was struck from the registry and can't be recovered. Reform that costs the powerful nothing is the only reform that passes.

- **This is the merchant class's century — let them cash in.** §12 and §13 locked them out of the exam and had them buying up collapsed noble estates during the Trials. So they enter this era rich, excluded, and holding the empire's debt. Reason plus money plus the printing press is exactly the combination that built the real bourgeoisie. The single biggest structural reform you could put here is **the civil examination finally opening to commoners** — new money prying open the noble-only door that defined the Long Stability. If you want one concrete "reform" to anchor the era, that's the one.
- **Who's the empire's Voltaire?** Someone writes the book that does to the Neo-Pataoiut masterwork (§12, still unnamed) what Takar did to the registry — takes its sacred logic apart in plain language and makes it look like superstition. Name that dissident. A banned, pamphleted, wildly-read text that argues the matriarchy was real history and the Pataoiut was a tyrant's invention would be the intellectual spine of the whole era. Pair the philosopher with the philosopher's-text the way you'll pair §12's masterwork with its author.
- **Women re-enter the written record here — and it starts in the margins.** It's been over two thousand years since a woman's voice carried weight in the empire (§10–11). The Enlightenment's real pattern is that reform movements teach each other: people organizing against one injustice learn the tools and turn them on their own. Show the first salon hostess who hosts the dangerous conversation, the first pamphlet under a woman's name, the first scholar to dig the matriarchy out of the pre-Goteivati records and publish it. They won't win in this era. They plant what the Post-Reform and Minara eras will have to answer.
- **Every reform breeds its backlash — give the counter-reform a face.** The houses that the Pataoiut made don't disarm because a philosopher published a clever book. Show the reactionary faction: the Circle clergy defending revealed order, the old blood defending the exam monopoly, the provincial magistrates who ran the Trials and now insist they only followed the ledger.

The Age of Revolutions energy in the back half (~1,780–1,840 analog) should feel genuinely contested — reform could lose, and in some provinces it does.

Material culture — European Enlightenment / Age of Reason (~1685–1815)

Grounded in cited Enlightenment practice (salons, coffeehouses, print culture, Beccaria's penal reform, neoclassicism, the Age of Revolutions), then adapted to carry the Pataoiut's slow, partial loosening. Redirect any anchor that doesn't fit.

- **Clothing & fashion.** Real era: the "**Great Male Renunciation**" and the late-century swing from rococo excess to **neoclassical plainness** — sober tailoring for men, the simple *chemise* dress, restraint coded as virtue and reason. *Adapt:* reformers reject the Sun Court's favor-economy wardrobe (§11), where cloth broadcast nearness to the throne. Plain dress becomes a political statement — a merchant or a reform-minded noble signaling that worth comes from mind and work, not inherited rank-dyes. The old peacock court look starts to read as decadent and a little embarrassing.
- **Food & cuisine.** Real era: **coffeehouses as "penny universities"** — cheap, public, news-soaked rooms where any literate man could argue politics with strangers, and **salons** where hostesses curated the era's sharpest conversation. *Adapt:* §12's refined tea-house culture matures into a genuine public sphere. Coffee-and-debate houses in the capital and merchant cities become the first places in a thousand years where the Pataoiut gets argued *out loud, in public, by commoners*. The state alternately taxes them, spies on them, and tries to shut them down.
- **Architecture.** Real era: **neoclassical revival** — symmetry, columns, the public **library, museum, and lecture hall** as civic temples of reason. *Adapt:* the registry halls of §13 — the bureaucratic buildings where execution orders were processed — are repurposed or rebuilt as public academies and lending libraries. Architecture of secrecy becomes architecture of openness, sometimes literally: a hall where women were once condemned reopens as a reading room any literate subject can enter.
- **Weapons & military tactics.** Real era: **citizen armies and the *levée en masse** — *the revolutionary idea that a soldier fights for a nation, not a king, and mass conscription of citizens rather than subjects*. *Adapt:* the imperial army,

atrophied across §12's long peace, is forced to modernize in the era's turbulent back half. The sharper fight is over the Academy's licensed magic corps: do the empire's mages serve the throne or the realm? When reform-era unrest spreads, which side do the registered mages take? That question decides more than any battle.*

- **Legal systems.** Real era: the heart of the Enlightenment — **Beccaria's *On Crimes and Punishments** *ends judicial torture, social-contract theory and constitutionalism limit the crown, codified rights and separation of church and state spread, and the Napoleonic Code rationalizes civil law.* Adapt: *this is the era's reform settlement under Emperor Astyan II (~1,852). The B.W. statute is repealed; the Pataoiut's cruelest civil provisions from the Sun King's codification (§11) are rolled back; coverture-style laws that erased women's legal personhood are loosened. Judicial torture in the Academy's old tribunals is abolished. But — the locked ceiling — the Pataoiut's framework* survives, and the empire never names the Trials a crime. Reform reaches the cruelty, not the foundation.*
- **Trade goods & economy.** Real era: **Adam Smith's *Wealth of Nations* (1776)**, free-market theory, the rising bourgeoisie, and the first stirrings of industry challenging guild monopolies. Adapt: *the merchant fortunes built on §13's collapsed noble estates convert into real political leverage. The Rern economy modernizes; free-trade arguments challenge the state magic-license monopoly (§11); the great commercial houses fund the salons, the pamphlets, and — quietly — the reform-minded faction at court. Money is buying what blood used to own.*
- **Funeral & death customs.** Real era: the **secularization of death** and the **civic monument** — the *Panthéon* interring great men as secular saints, public memory replacing purely religious rite. Adapt: *the first monuments to Blood Trials victims become possible — and bitterly contested. The secret, tablet-less mourning of §13 inches toward public memorial. A natural capstone: a state pantheon where **Takar** is interred as the empire's secular saint, the commoner whose measurement saved a hundred thousand future mothers. Whether the murdered women themselves get named monuments — or stay statistics — is the era's moral test in stone.*

- **Daily life.** Real era: a **literacy explosion** and a true **reading public** — newspapers, cheap journals, pamphlet wars, novels, and the salon as the era's social engine. *Adapt:* §12's literate household culture becomes a population that *argues in print*. For the first time since Goteivati, the empire debates itself in public — banned books copied by hand, satirical pamphlets mocking the Circle, broadsheets reprinting Takar's tables next to the Neo-Pataoiut catechism so readers can judge for themselves. The Pataoiut becomes, after a thousand years of gravity, *a question* again.

✓ Fix — subdivide the ~324 years into a five-phase arc

The long reckoning, walked from Takar's proof to Astyan's settlement. Scaffolding to fill with named reformers, philosophers, and reigns as we build.

Phase	Span (approx.)	What defines it
I · The Reckoning Deferred	~1,528 – 1,600 AR	The Trials stop; the empire moves on without justice. Takar's method spreads quietly through the Academy and the merchant cities. The first private doubts about the Pataoiut's other claims. Grief goes underground; the registry keeps running, but its paternity-test use is now suspect.
II · The Age of Reason	~1,600 – 1,700 AR	Salons and coffee-debate houses become the public sphere. The empire's Voltaire-analog writes the text that takes the Neo-Pataoiut masterwork apart. Reason, evidence, and the social contract enter educated conversation. The Circle and the old blood begin to feel the ground move.
III · The Argument Goes Public	~1,700 – 1,780 AR	Pamphlet wars. The merchant class leverages money plus reason plus print to pry the civil examination open — at least for those who can pay . Women re-enter the written record — first salons, first signed pamphlets, first published histories of the lost matriarchy. The counter-reform faction organizes against all of it.
IV · The Age of Revolutions	~1,780 – 1,840 AR	Reform versus reaction comes to a head. Unrest in the merchant cities and the provinces; the magic corps' loyalty in question; the throne forced off the fence. Reform could lose here — and in some

Phase	Span (approx.)	What defines it
		provinces it does. The most genuinely contested stretch of the era.
V · The Settlement	~1,840 – 1,852 AR	Emperor Astyan II codifies the reforms that reverse the Pataoiut's worst cruelties — the B.W. statute repealed, the harshest civil code rolled back, judicial torture abolished, the civil exam cracked open to wealthy commoners. Reform, not revolution: the framework stands, the cruelty is cut away, and the empire still calls the Trials a <i>mistake</i> . The settlement carries straight into the Post-Reform Period.

LOCKED — Section 14 (The Age of Reforms, ~1,528–1,852 AR). (a)

Anchor: **European Enlightenment / Age of Reason (~1685–1815)** tipping into the **Age of Revolutions**. (b) The era is the late, partial reckoning that Takar's 1,528 proof set off — reason and evidence spreading from the registry to philosophy to law — but it is **reform, not revolution**: the Pataoiut bends and never breaks, leaving *A Crown of Glory's* 2,632 world still patriarchal. (c) **The era closes ~1,852 under Emperor Astyan II** — reverted to canon: the TIMELINE, the Six Kingdoms map, KEY WORDS, and Religion all date his reforms to ~1,852 (~780 years before Minara's era), and an earlier draft that moved him to ~2,400+ is corrected. (d) The **civil examination opens only partially** — wealthy commoners buy their sons in; the poor stay locked out (money becomes political access for the first time; the majority does not). (e) The empire **never names the Blood Trials a crime** — the official line stays "*a mistake*" forever; the moral verdict lives only in private grief and dissident print. (f) The fate of the **magic registry and the Solisian Academy** is still **TBD** (reformed / humbled / rebranded) — open when you want it. (g) The ~324 years subdivide into the five-phase arc above (Phase V renamed *The Settlement*).

15 · The Post-Reform Period (~1,852 – 2,400 AR)

Pairs with: TIMELINE, ERA'S REFERENCE, House Patton, The Solisian Academy, Magic System, Religion, KEY WORDS AND TERMS, Name Evolution Across Eras

Real-world anchors (this era). This is the bridge from §14's reform settlement to Minara's Victorian world, so it carries two engines at once. Up top: the **post-Napoleonic conservative order** — the **Congress of Vienna (1814–15)**, **Metternich**, and the **Concert of Europe** — the reaction that follows an Age of Revolutions and freezes its gains in place. Underneath: the **Industrial Revolution (~1760–1900)** — steam, railroads, the telegraph, factories, mass urbanization, an industrial working class, and the bourgeoisie finishing the climb they started in §14. The two don't cancel out; they run in parallel. The throne spends the era trying to hold a political line while the machine remakes the society beneath it regardless. The kit: **factory towns and smokestacks**, the **railway and the telegraph**, **mass-produced everything**, **child labor and the first factory acts**, **anti-combination laws** crushing organized labor, **1848-style upheaval** mid-era, and **nationalism / nation-state consolidation** (the German and Italian unification energy) hardening the old six kingdoms into proto-nations under the imperial umbrella. §14's salons gave way to factory smoke. The Age of Reforms argued the empire into change; the Post-Reform Period builds the modern, industrial, still-patriarchal world *A Crown of Glory* will walk around in.

What this era actually is

The Age of Reforms ended on a settlement nobody loved — the worst cruelties cut away, the framework left standing, a million dead still filed under "*a mistake*" (§14). The Post-Reform Period is what happens when the empire tries to hold that exact line for five centuries while the ground moves under it.

Two things happen at once, and they don't agree. Up top, the throne and the old blood do what every order does after it survives a near-revolution: they clamp down. The unrest in §14's back half frightened them, so the era opens **conservative** — a Concert-of-Europe settlement that treats the reform gains as the absolute ceiling and burns its political capital making sure nothing goes further. This is **containment, not rollback** — the B.W. statute stays repealed, the

reforms hold, judicial torture stays abolished — but the official mood is *enough now*, and a Metternich-style apparatus polices anyone who says otherwise. The reforms get frozen, not deepened.

Underneath, the **machine** arrives, and it does not care what the throne decided. Factories, railroads, the telegraph, cities that double and double again. But the machine runs on *mundane* power — coal, steam, and iron, not magic. Magic stays exactly what it always was: a gated, expensive, Academy-licensed craft of the nobility. The deep irony of the era is that cheap industrial manufacturing makes magic *more* of an aristocratic marker, not less — when a factory can turn out almost anything, the one thing money alone still can't buy is the gift and the license to wield it. The machine democratizes goods; magic stays a badge of blood. And industry needs hands, which collides head-on with the Pataoiut. The empire's whole gender order assumed women belonged in the home — but the factory floor swallows working-class women and children by the thousand, because the domestic ideal was *always* a luxury only the rich could afford. The contradiction gets papered over by **class**: the caged noblewoman and the mill girl live in the same empire under the same Pataoiut, and the ideology survives by quietly applying only to the women whose husbands can keep them out of the mills — the working woman pays twice, ground down by the factory and then judged *lesser* for laboring in it at all.

By ~2,400 the empire is recognizably the modern, smoke-and-steel, still-patriarchal world of *A Crown of Glory*. What waits just over this horizon is not a reckoning but the empire's confident high noon — the Late Modern Age (§16). The Post-Reform Period is the long, smoky middle: reform frozen, industry unleashed, and a new set of pressures — labor, the machine, nationalism — quietly replacing the old ones.

/ Canon conflicts & errors landing in this era

-  **This era is blank canvas — the fix is building it, not reconciling it.** Unlike §§11–14, the Post-Reform Period has no existing prose canon to correct: it appears only as a label on the era banner (ERA'S REFERENCE and every house page). So the "fix" here is supplying the era a spine that (a) follows cleanly from §14's frozen settlement and (b) hands off cleanly to Minara's Victorian era. Nothing below contradicts written canon; it fills a 548-year gap.

-  **The bridge constraint is locked by the books: this era must end patriarchal.** *A Crown of Glory* (2,632) is still a patriarchal empire — Astyan II's ~1,852 reforms (§14) cut the worst cruelties without breaking the Pataoiut. So whatever upheaval the Post-Reform Period contains, it stops short of breaking the Pataoiut — the labor convulsions and reform pressures of the era get contained, deferred, or absorbed, leaving the patriarchal order standing into Minara's era.
-  **§14's open question resolved — the Academy *rebrands* (locked).** §14 left it TBD whether the Solisian Academy is *reformed*, *humbled*, or *rebranded* after enabling the Blood Trials. Your ruling: it **rebrands**. As mundane industry makes the material world cheap, the Academy repositions itself as the proud guardian of Takar's scientific method and the exclusive gatekeeper of an elite magical craft that machines can't replicate — recasting itself as the home of *reason* while never once answering for the two centuries of Blood Trials it enabled. Prestige and indispensability to the nobility become its absolution. It survives into 2,632 powerful and unrepentant, its monopoly intact precisely because magic never industrialized into something the masses could touch.
-  **Tech-level anchor resolved — magic stays elite, machines stay mundane (locked).** Your ruling: magic does **not** industrialize. The trains, presses, and factories of the modern empire run on coal, steam, and iron — ordinary industry, no magitech. Magic remains a gated, artisanal, Academy-licensed craft of the nobility: expensive and rare. So the modern material world of *A Crown of Glory* (2,632) — the trains, the printing, the cheap mass goods — is *mundane* industrial technology, while the Academy's town, World Portals, and 150,000-Rern tuition are **elite amenities**, not mass infrastructure: arcane luxuries the rich can reach and the masses can only read about. Two parallel worlds in one empire — the people have machines, the nobility has spells.

Worldbuilding critique (Post-Reform)

- **Containment is a drama, not a lull.** The temptation is to write five centuries of "nothing much happened." Resist it. The men who freeze the reforms in place are doing something — they're the Metternichs, the statesmen who genuinely believe they saved the empire from another Goteivati by *stopping the clock*. Give the conservative order a face and a real argument. The most chilling version isn't a villain; it's a decent, frightened administrator who looks at §14's

unrest and concludes that a little tyranny is the price of never burning a million people again.

- **The machine is the era's real protagonist.** The single most important image you can plant is the **first railroad cutting through a province that hasn't changed in a thousand years**, or the **first smokestack going up over one of §13's old registry halls**. Industrialization is the thing that actually transforms the empire while the politicians think they're holding the line. Show the agrarian rhythm dying and clock-time and the factory whistle taking its place.
- **Magic-as-aristocratic-redoubt is the sharp beat here.** The machine makes everything cheap — cloth, print, travel, light — so the one thing it *can't* manufacture becomes the purest marker of rank: the gift, and the Academy license to use it. Show the newly-rich industrialist who can buy a palace, a railway, and a noble daughter's hand, but *not* a magical education for his sons, because the Academy guards that door with blood-and-coin requirements no factory fortune alone can meet. Magic stops being merely useful and becomes *prestige* — the aristocracy's last enclosure in a world where money is buying up everything else. The drama is the collision: industrial money that owns the material world and still can't buy its way past the Academy's gate.
- **The mill girl and the caged lady are the same Pataoiut seen from two classes.** This is the era's central social truth and its sharpest scene. An elite woman in 2,200 AR is more confined than her great-grandmother — the industrial bourgeoisie performs domestic piety harder than the old blood ever did. Meanwhile a working woman ten streets away does fourteen-hour shifts in a textile mill. Same empire, same ideology, opposite lives. The Pataoiut survives industrialization by becoming a thing only the rich can afford to obey.
- **Give the mid-era convulsion (the 1848 analog) a face, and let it lose.** The labor question explodes once, hard, somewhere around the middle of the era — strikes, a magic-corps loyalty crisis redux, the old kingdoms' nationalism flaring under the imperial umbrella. Per the bridge constraint it can't win (the Pataoiut survives to 2,632), but it should come *close*, and it should plant exactly the grievances the modern empire carries unresolved into *A Crown of Glory*.
- **This is where the six kingdoms become the map of 2,632.** Nationalism is the era's quiet structural force. The Name Evolution Across Eras renamings and

the late-imperial Six Kingdoms map (~2,632) get their logic *here* — regional identity hardening into proto-national feeling as railroads and print knit each old kingdom together internally even as the empire holds them together politically.

Material culture — Industrial Revolution + post-Napoleonic conservative order

Grounded in cited 19th-century practice (industrialization, the Concert of Europe, the Factory Acts, nation-state consolidation), then adapted to carry the Pataoiut's class-split survival and the empire's magic economy. Redirect any anchor that doesn't fit.

- **Clothing & fashion.** Real era: **factory-made textiles** collapse the price of cloth, and fashion democratizes for the first time; elite distinction shifts to **hand-made vs machine-made**, and men settle into sober bourgeois black. *Adapt:* §14's plain reform-dress hardens into the uniform of the industrial bourgeoisie. The Pataoiut class-split shows in the wardrobe — a noblewoman's hand-embroidered confinement-wear versus the mill girl's cheap printed cotton; the same modesty rules read as *piety* on the rich and as *workwear* on the poor.
- **Food & cuisine.** Real era: **urban food markets, adulteration scandals, canning and preservation**, and the factory canteen feeding the shift. *Adapt:* the capital's café-and-debate culture (§14) splits by class — bourgeois coffee rooms where reform is now safely *nostalgic*, and rough workers' canteens near the mills where the next argument is already brewing. Imperial public dining (the old *grand couvert*, §11) survives only as antique court theater.
- **Architecture.** Real era: the **factory, the railway station as cathedral of the age, the smokestack, gas lighting, and the tenement**. *Adapt:* §13's registry halls and §14's reading-room academies get a third life as **company offices and licensing bureaus**. The grand railway terminus becomes the era's signature building — and the tenement its shameful one. Sun-imagery, once the Circle's and then the Sun King's, now turns up stamped on factory gates and company seals.
- **Weapons & military tactics.** Real era: **mass-produced firearms, railroads moving armies, industrial war**. *Adapt:* the imperial army finally re-modernizes

for good — and it does it with *mundane* industrial weapons, mass-produced rifles and rail-borne logistics, not battle-magic. The empire's licensed mages stay what they've always been: a small, elite corps, too rare and too costly to field as line troops. The old §14 question — do the mages serve the **throne** or the **realm**? — sharpens precisely *because* they are so few: an aristocratic magical caste deciding where its loyalty sits while the actual fighting is done by industrial armies of commoners.

- **Legal systems.** Real era: the era's signature reforms are **labor law** — the **Factory Acts** limiting child labor and working hours — paired, hypocritically, with **anti-combination laws** that criminalize the unions trying to win those same protections. *Adapt:* if §14's signature reform was cracking the civil exam, §15's is **the first factory code** — the empire grudgingly regulating the mills it depends on, while the conservative order simultaneously bans organized labor. Reform and repression in the same statute book. (*And note: this regulates the working woman's hours without ever touching the Pataoiut itself.*)
- **Trade goods & economy.** Real era: **industrial capitalism, joint-stock companies, boom-and-bust cycles**, the bourgeoisie now dominant, currencies on a hard metal standard. *Adapt:* the **Rern** modernizes into an industrial-age currency; the merchant fortunes of §13–§14 become **industrial dynasties** that out-wealth most noble houses and, this time, can't be kept from power. But money buys everything *except* magic: the Academy's licensing monopoly (§11) holds firm precisely because the gift stays rare and ungovernable by capital. The era's signature economic tension is the new industrial fortune that owns mines, mills, and railways yet still can't purchase a magical education for its heirs — wealth and the gift, finally separable, eyeing each other across a gap neither can quite close.
- **Funeral & death customs.** Real era: the **anonymous industrial death** — the worker killed in a machine, the pauper's grave — and the rise of the **civic monument** to the great man. *Adapt:* §14's contested Takar-pantheon becomes a settled **national monument** — the commoner-saint safely canonized now that he's a century dead and useful to the state's self-image. The harder question stays open: do the **mill dead** and the still-unnamed **Blood Trials**

women ever get monuments, or does the empire only memorialize the men whose deaths flatter it?

- **Daily life.** Real era: **clock-time and the factory whistle** replace the agrarian rhythm; **mass newspapers and the telegraph** shrink the world; commuter towns ring the cities. *Adapt:* for the first time the whole empire runs on the same clock — the railway timetable and the work whistle imposing a single industrial tempo on six kingdoms that used to keep their own time. Cheap mass print turns §14's reading public into a genuine national audience, and the telegraph means the throne in the capital hears about a strike in the provinces the same day it happens. The empire gets *fast*.

✓ Fix — subdivide the ~548 years into a five-phase arc

The long, smoky middle, walked from §14's frozen settlement to the threshold of Minara's era. Scaffolding to fill with named reigns, industrialists, and crises as we build.

Phase	Span (approx.)	What defines it
I · The Frozen Settlement	~1,852 – 1,950 AR	The Concert-of-Europe reaction. §14's reforms are held as a hard ceiling — kept, not extended — and a Metternich-style apparatus polices dissent. The throne and old blood, spooked by the Age of Revolutions, declare <i>enough now</i> . Stability bought by stopping the clock.
II · The First Smoke	~1,950 – 2,080 AR	Industrialization begins — mundane factories, first railroads, the telegraph, all coal-and-steam, no magic. A new industrial working class is born that the Pataoiut's domestic ideal never accounted for. Magic stays untouched in its Academy enclosure, already beginning to look like an aristocratic relic beside the roaring mundane machine.
III · The Machine Age	~2,080 – 2,220 AR	Full industrialization. Cities swell; the bourgeoisie become industrial dynasties richer than noble houses. The Pataoiut's class-split hardens — elite confinement performed harder than ever while working women fill the mills. Magic stays an elite craft money can't buy; the Academy reigns as gatekeeper of the one privilege industry can't mass-produce.

Phase	Span (approx.)	What defines it
IV · The Labor Convulsion	~2,220 – 2,320 AR	The 1848 analog. Strikes, mill unrest, the magic-corps loyalty crisis redux, and the old kingdoms' nationalism flaring under the imperial umbrella. Reform versus reaction, round two — it comes close and it loses , per the bridge constraint, planting grievances the empire carries unresolved into Minara's era.
V · Into the Modern Age	~2,320 – 2,400 AR	The settlement that carries into Minara's era. The modern industrial empire takes its <i>Crown of Glory</i> shape — railways, presses, the telegraph, the Academy and its World Portals, a patriarchal order now wearing industrial clothes. The empire's confident high noon — the Late Modern Age — waits just over the horizon.

LOCKED — Section 15 (The Post-Reform Period, ~1,852–2,400 AR). (a)

Anchor: the **Industrial Revolution** + the **post-Napoleonic conservative order** (Congress of Vienna / Metternich / Concert of Europe). (b) **Two engines at once** — political **containment** up top (the reforms of §14 frozen as a ceiling, not rolled back) and **industrial transformation** underneath. (c) **Magic does NOT industrialize** — machines stay mundane (coal, steam, iron); magic stays an elite, artisanal, Academy-licensed craft of the nobility. Cheap industry makes magic *more* of an aristocratic marker, not less; the Academy's town, World Portals, and high tuition in 2,632 are elite amenities, not mass infrastructure. (d) **The Academy rebrands** (resolving §14's open TBD) — recasting itself as guardian of Takar's scientific method and the exclusive gatekeeper of elite magic, never answering for the Blood Trials; it survives into 2,632 powerful and unrepentant. (e) The **Pataoiut survives by class-splitting** — noble women caged and forbidden to work, working-class women stigmatized as *lesser* for laboring in the mills; the ideology applies only to women whose husbands can afford to keep them out of the factory. (f) A **mid-era labor convulsion** (1848 analog) that comes close and **loses**, leaving the patriarchal order standing into Minara's era. (g) The ~548 years subdivide into the five-phase arc above.

16 · The Late Modern Age (~2,400 – 2,632 AR)

Pairs with: *TIMELINE*, *ERA'S REFERENCE*, *House Patton*, *The Solisian Academy*, *Magic System*, *Religion*, *KEY WORDS AND TERMS*, *Name Evolution Across Eras*, *A CROWN OF GLORY BOOK INFO*

Real-world anchors (this era). You asked me to pick among late-Victorian, Belle Époque, and Edwardian — and for your spine, *confident imperial noon that's secretly its last daylight*, the answer is **late-Victorian high imperialism / the Pax Britannica at its zenith (~1870–1901)**. Belle Époque and Edwardian both have the right *mood* — gaslit confidence, ornamental wealth, a golden afternoon — but they read as a society already *coasting*, past its peak. Late-Victorian high noon is the one that still *believes* in itself completely: the empire on which the sun never sets, the iron-and-glass triumphalism of the great exhibition, the Jubilee pageantry, the flat certainty that this order is permanent and progress is a straight line. That self-assurance is exactly what makes it the right *last daylight* — the reader knows the catastrophe of *A Crown of Glory* is coming, and the horror is an empire at its most magnificent and least suspecting. The kit: **global empire and the civilizing myth**, the **gold standard and the City's finance capital**, **department stores and mass consumer goods**, **Gothic Revival and the great glass exhibition halls**, the **maturity of rail, telegraph, and the first electric light**, **elaborate mourning culture**, and a **separate-spheres domestic ideology** performed harder by the bourgeoisie than the old blood ever managed. Supplement with a thread of **fin-de-siècle unease** — the spiritualism, the gothic uncanny, the sense beneath the confidence that something is thinning — to carry the Book 4 catastrophe in at the edges.

What this era actually is

The Late Modern Age is the empire at high noon — and noon is the last hour before the light starts to go.

Coming out of §15's smoke and iron, the empire arrives at something it has never had before: *confidence*. Not the brittle, frozen confidence of the Concert-of-Europe reaction, but the genuine, ornamental, sun-drenched self-assurance of a power that believes it has solved itself. The machine works. The trains run on time across six kingdoms. The **Rern** is the hardest currency in the known world. The **Solisian Academy** gates magic for the nobility, the **Pataoiut** keeps its women sorted by class, and the crown-controlled **Circle** blesses all of it from on high. To a noble in ~2,500 AR the empire is not just stable — it is *finished*, the final and correct form of human society, and the only thing left to do is decorate it.

That is the era's voice: a confident imperial noon. And the cruelty the books will spring is that it is *also its last full daylight*. Underneath the pageantry, the things that will become Book 4 are stirring at the edges of the map and the edges of belief. Out past the Mystic Isles — **Thult**, the barren place with no fixed boundary — the old **world doors** are not as quiet as the Academy's official line insists; the **veil** that has held the demon-side at arm's length since the Warriors' Age is, by measurements nobody in authority wants published, *thinning*. There are reports — dismissed as provincial superstition, peasant hysteria, the kind of thing a confident empire files under nonsense — of **dream-demons (Valoka)** troubling sleepers in border villages, of livestock and then people sickening in ways the Academy's healers can't name (the first deniable whisper of what later becomes the **Monstru Plague**). And in the Circle's locked archives, the old prophecy nobody recites in polite company — *when the Eclipsing Sun and the False Star meet, the old god shall shatter the world* — stops looking like dead scripture and starts looking like a calendar. None of this is the era's *plot*. It is the era's *weather*, gathering at the horizon while the court dances. The Late Modern Age is written from inside the confidence — which means the catastrophe should never be foregrounded, only seeded: a wrongness the reader catches and the characters explain away.

● / ● Canon conflicts & errors landing in this era

- **The era is the on-ramp to *A Crown of Glory* — mostly blank canvas, and that's the job (locked spine).** Like §15, the Late Modern Age has almost no existing prose canon — it's a label on the era banner and the threshold of the books. The fix is to build it so it (a) follows §15's industrial settlement cleanly and (b) hands directly into the world of *A Crown of Glory* at ~2,632. The constraint from the books is absolute: this era must end as the recognizable

CoG empire — patriarchal, Academy-gated, Circle-blessed, industrially modern, and *confident*.

- **Anchor chosen — late-Victorian high noon, not Belle Époque or Edwardian (your ruling, my pick).** You asked me to choose; I'm locking **late-Victorian high imperialism (~1870–1901)**. Reason restated: it's the only one of the three that still *believes*, and the spine needs belief, not coasting. (If you'd rather tilt the back end toward an Edwardian *golden-afternoon-already-fading* mood for the final phase, that's a clean tweak — say the word.)
- **Astyan II is back at ~1,852 — this era no longer hosts his reckoning (correction, locked).** Earlier drafting (an old §14 ruling) had deferred Astyan II's fuller reform into this era (~2,400+). You've reverted that to canon: the THE SIX KINGDOMS 8,900BR - 7,163 BR MAP, KEY WORDS AND TERMS, and Religion all date **Astyan II's reforms to ~1,852 AR** — the close of §14, ~780 years before Minara's era. So the Late Modern Age does **not** center an Astyan II reform arc; his renaming-and-reform settlement is correctly the 1,852 event (§14), and §14/§15 are being corrected to match. This era's spine is *imperial high noon*, not deferred reckoning — which actually fits the confident-twilight read better than the old reform framing did.
- **Dating flag (gentle — your call to keep the ruler TBD).** You ruled the capstone ruler stays **TBD** — *not* Emperor Veo Olem — on the reasoning that this sits "almost 780 years before the events of *Crown of Glory*." One honest note so the timeline stays clean: in canon **Minara is born in 2,632 AR**, and "Minara's era ~2,632" is the *Crown of Glory* setting — so the ~780-year gap is the distance from **Astyan II (1,852)** to Minara, not from this era to the books. As scoped (~2,400–2,632), the Late Modern Age actually runs *up to* the CoG threshold, so its final years would canonically touch the reign of **Emperor Veo Olem Patton** (and the hidden power, **Empress Macenja / Vandrea**). I'm honoring your ruling regardless — **capstone ruler stays TBD and unnamed** — but flagging that if you want a clean gap *before* the books, the era should either end earlier (say ~2,580) or we treat the final phase as "the reign just before the CoG cast." Tell me which and I'll set it; nothing else in the era depends on it.
- **Magic stays elite — §15's ruling carries through to the books (locked).** No change: machines are mundane, magic is the Academy's gated aristocratic

craft. By ~2,632 this is exactly the CoG status quo — the **Solisian Academy** with its 150,000-Rern tuition and its divisions (**Gnati** uncontrolled, **Arolim** holy/healing and rarest, **Minarei** control/puppetry, **Daseri** fire), magic a badge of blood in a world where industry made everything else cheap.

-  **Seed Book 4, don't stage it (your "blend" ruling, locked).** Per your choice the era is **history-first** — a real societal/era survey of imperial high noon — *with* the catastrophe seeded as distant weather: the thinning veil, the restless **world doors** past Thult, the first deniable **Valoka** dream-demon reports, the proto-**Monstru Plague** sicknesses, and the **Eclipsing Sun / False Star** prophecy resurfacing. These stay at the edges. The era's *text* is the confident empire; the catastrophe is the thing the reader sees and the characters dismiss.

Worldbuilding critique (Late Modern)

- **Write the confidence straight — let the empire be magnificent.** The trap is to write the twilight as obvious decline, all gloom and omen. Don't. The power of "last daylight" is that the daylight is *real*. Show the empire at its genuine best: the world's-fair spectacle, the gas-lit boulevards, the railway that crosses a continent in days, the Jubilee-style pageant where six kingdoms parade under one crown. The reader should half-believe the empire's own story — that this is permanent — because that's what makes the coming catastrophe land. Confidence first; dread underneath.
- **The Hollow Court is your sharpest image.** An empire that believes it is *finished* stops governing and starts *performing*. Show a court whose whole energy now goes into ceremony, precedence, and ornament — a Sun Court (§11) that has forgotten it was ever a cage and now thinks it is simply the natural shape of grandeur. The most chilling figure here isn't a tyrant; it's a brilliant, bored aristocracy arranging flowers while the veil thins. Decadence as a symptom of certainty.
- **Let the fin-de-siècle unease leak in through the cracks the empire can't explain.** The Victorians, at their most confident, were also obsessed with séances, ghosts, and the uncanny — the repressed underside of all that progress. That is your seam. Spiritualism salons where bored noblewomen contact "the other side" and occasionally contact *something real*. An Arolim

healer (the rarest, holy division) quietly logging cases the official cosmology says are impossible. A provincial priest whose congregation's nightmares all rhyme. The empire has an explanation for everything — which is exactly why it cannot see the one thing that doesn't fit.

- **The Pataoiut at high noon is performed, not enforced — and that's scarier.** By this era nobody needs to *make* anyone obey; the ideology is air. Show the elite woman of ~2,500 who is more elaborately confined than any ancestor and experiences it as *privilege* — the bigger house, the finer cage, the separate sphere as a mark of how civilized her family is. Meanwhile the mill woman of \$15 is still in the mill. The gender order is at its most total precisely because it no longer looks like force. This is the world Minara is born into; make it feel inevitable so her story can crack it.
- **Plant the CoG furniture without spending it.** This is the era to *quietly install* the things Book 4 will use: the **world doors** and Thult's strangeness; the **Special Division** as a barely-known imperial office; the Academy's divisions as established fact; the **prophecy** as archive-dust nobody takes seriously; the **Eclipsing Sun** as a dynastic title (firstborn of the reigning emperor). Drop them as *background furniture* of a confident empire, so that when the books pick them up they feel like they were always there — because, in the fixes doc, they were.
- **Give the empire one genuine triumph near the end — and make it the last one.** A confident noon deserves a capstone achievement: a grand exposition, a continental rail completion, a Jubilee for an unnamed long-reigning monarch — something that *looks* like the empire proving its permanence forever. Set it late (Phase IV–V). Then let the reader feel the floor under it. The most devastating version of "last daylight" is a victory parade with the veil already tearing offstage.

Material culture — late-Victorian high imperialism (~1870–1901)

Grounded in cited late-Victorian practice (the high imperial Pax Britannica, the great exhibitions, the gold standard, separate-spheres domesticity, elaborate mourning culture, the early electric city), then adapted to carry the empire's class-

split Pataoiut, its elite magic economy, and the Book 4 catastrophe seeded at the edges. Redirect any anchor that doesn't fit.

- **Clothing & fashion.** Real era: **department-store ready-to-wear** democratizes fashion while elite distinction retreats into *bespoke* tailoring, the corseted silhouette and the bustle, and rigidly **coded mourning dress** (widows in black for years, jet jewelry, mourning by the calendar). *Adapt:* the \$15 class-split in cloth completes — the mill woman buys off the rack, the noblewoman commissions confinement-wear that advertises she never lifts a hand. The empire's elaborate mourning code becomes a quiet plot-seam: a court that ritualizes death this heavily is a court that is, underneath the confidence, *uneasy about it*.
- **Food & cuisine.** Real era: **tinned and refrigerated goods** hauled from across a global empire, the **elaborate multi-course dinner** as the bourgeoisie's theater of arrival, afternoon tea codified, adulteration laws and the first food standards. *Adapt:* the capital eats the whole empire — Thultish rarities and kingdom-by-kingdom delicacies brought in by rail and steamer as edible proof of reach. The formal dinner becomes the era's status liturgy; \$14's coffee-house argument is now a *nostalgic* genre, reform safely behind glass. (And somewhere a border province's food is going wrong in ways the inspectors can't classify — the Monstru whisper.)
- **Architecture.** Real era: **Gothic Revival** civic grandeur, the **iron-and-glass exhibition hall**, the **grand arcade and department store**, monumental museums and libraries, and the first **electric-lit** streets over the gaslight. *Adapt:* the empire builds its certainty in stone and glass — a world's-fair palace that becomes the era's signature image, sun-motifs (the Circle's, then the Sun King's, now simply the *empire's*) worked into every façade. The Academy's gated town reaches its CoG form: an arcane campus walled off inside the modern city, World Portals humming behind doors the public will never pass.
- **Weapons & military tactics.** Real era: **breech-loading rifles, the machine gun, ironclad then steel warships, colonial expeditionary warfare** against far weaker opponents — industrial force projected with total confidence. *Adapt:* the imperial military is mundane, modern, and *smug* — it has not fought an existential war in living memory and assumes it never will again. The tiny elite

magic corps is ceremonial as much as martial, a peacock guard. This is precisely the army that will be unready for Book 4: built to overawe provinces, not to fight something that comes *through the veil*.

- **Legal systems.** Real era: **education acts, public-health and sanitation law, further factory acts, the slow expansion of the franchise** — and, still, the **legal subordination of women** (limited property rights, no vote, coverture only partly softened). *Adapt:* the era legislates *comfort and order* — schools, sewers, shorter shifts — the confident empire improving itself at the margins while the **Pataoiut framework stands untouched**. Note the continuity: §14 cut the cruelty, §15 froze the politics, and the Late Modern Age *administers* the result rather than reopening it. Reform is a museum piece; management is the mode.
- **Trade goods & economy.** Real era: the **gold standard, the City as the world's financial center, joint-stock globalism, free-trade imperialism**, consumer abundance built on imperial extraction. *Adapt:* the **Rern** is now the anchor currency of the known world, and the empire's wealth is *financial* as much as industrial — the great houses and the industrial dynasties of §15 have merged into a single moneyed class that owns mills, mines, rails, *and* paper. The one thing money still can't buy stays the same: the Academy's gate. Magic is the last un-purchasable luxury, and the era's richest man still cannot license his son.
- **Funeral & death customs.** Real era: the full flower of **Victorian mourning** — garden cemeteries, monumental tombs, memento-mori photography, séance and spiritualism as mass middle-class pastime. *Adapt:* the empire's death-culture turns ornamental and, quietly, *porous*. The garden necropolis for the Patton line reaches its grandest form; meanwhile the spiritualism craze gives the thinning veil a *door into polite society* — parlor séances that are mostly fraud and occasionally, terribly, not. The era that most elaborately decorates death is the era right before death comes for it. The still-unnamed Blood Trials women remain unmemorialized; the empire mourns beautifully and selectively.
- **Daily life.** Real era: **electric light and the telephone** arriving over gas and post, **mass-circulation newspapers and photography**, the **railway timetable** as the rhythm of life, suburban respectability, the seaside holiday. *Adapt:* the empire is fast, lit, and photographed — for the first time the court's pageantry can be

reproduced and sold to a mass public, manufacturing the shared image of a permanent golden empire. The same press that prints the Jubilee also buries, on page nine, the provincial reports of bad dreams and sickening herds. The Late Modern subject lives in the best-documented, most confident, most thoroughly *explained* world the empire has ever produced — which is why nobody reads page nine.

 Fix — subdivide the ~232 years into a five-phase arc

Imperial high noon, walked from §15's industrial settlement to the threshold of A Crown of Glory. History-first, with the Book 4 catastrophe seeded as gathering weather. Scaffolding to fill with named reigns and crises as we build — the capstone ruler stays TBD per your ruling.

Phase	Span (approx.)	What defines it
I · The Gilded Calm	~2,400 – 2,450 AR	§15's industrial settlement matures into genuine confidence. The smoke-and-steel anxieties of the Labor Convulsion fade into prosperity; the empire stops bracing and starts believing. The modern order feels not just survivable but <i>permanent</i> — the floor for everything that follows.
II · Iron & Glass	~2,450 – 2,520 AR	The high-imperial build-out. World's-fair palaces, continental rail completed, gold-standard finance, the first electric light over the gaslit boulevards. The empire renders its self-image in stone, glass, and photograph — the civilizing myth at full volume. The Academy reaches its CoG form as the walled, gated guardian of elite magic.
III · The Hollow Court	~2,520 – 2,580 AR	The empire believes itself <i>finished</i> and the court turns from governing to performing — ceremony, precedence, and ornament as the whole business of power. Decadence as a symptom of certainty. The Pataoiut is performed, not enforced. The first deniable fin-de-siècle unease leaks in through séance parlors and cases the official cosmology can't classify.
IV · The Thinning Veil	~2,580 – 2,620 AR	The seeded catastrophe stirs at the edges: the world doors restless past Thult, Valoka dream-demon reports, proto- Monstru sicknesses, the Eclipsing Sun

Phase	Span (approx.)	What defines it
		/ False Star prophecy resurfacing in the archives — all dismissed as superstition. A late, grand imperial triumph (exposition or Jubilee) caps the confidence at the worst possible moment.
V · The Eclipsing Sun	~2,620 – 2,632 AR	The last daylight. The empire at its most magnificent arrives at the <i>Crown of Glory</i> threshold; the Eclipsing Sun title, the False Star prophecy, and the gathering catastrophe converge offstage. Capstone ruler TBD (not named, per your ruling). Hands directly into the books.

LOCKED — Section 16 (The Late Modern Age, ~2,400–2,632 AR). (a) Anchor: **late-Victorian high imperialism / the Pax Britannica at its zenith (~1870–1901)** — chosen over Belle Époque and Edwardian because it still *believes*. (b) Spine: **confident imperial noon that is secretly its last full daylight** — the empire at its most magnificent, ornamental, and unsuspecting, written from inside the confidence. (c) Treatment is a **blend** — history-first imperial-high-noon survey, with the Book 4 catastrophe **seeded as distant weather** (thinning veil, restless world doors past Thult, first deniable Valoka dream-demon reports, proto-Monstru sicknesses, the Eclipsing Sun / False Star prophecy resurfacing) — never foregrounded. (d) **Capstone ruler stays TBD and unnamed** per your ruling — *not* Emperor Veo Olem; dating tension flagged (this era as scoped runs up to the 2,632 CoG threshold — adjust the end date if you want a clean pre-books gap). (e) **Magic stays elite** (carrying §15) — mundane machines, Academy-gated aristocratic magic; by 2,632 this is the CoG status quo (150,000-Rern tuition; Gnati / Arolim / Minarei / Daseri divisions). (f) **Astyan II is corrected back to ~1,852 (§14)** — this era no longer hosts his reckoning; its spine is imperial twilight, not deferred reform. (g) The era ends as the recognizable A *Crown of Glory* empire and hands directly into the books. (h) The ~232 years subdivide into the five-phase arc above (Gilded Calm → Iron & Glass → Hollow Court → Thinning Veil → The Eclipsing Sun).

17 · Cross-Era Canon Audit — standing contradictions

Pairs with: [TIMELINE](#), [ERA'S REFERENCE](#), [KEY WORDS AND TERMS](#), [Religion](#), [Name Evolution Across Eras](#), [Historical Figures](#),  [CANON AUDIT — Tracking Doc](#)

What this section is — and isn't. §§1–16 walked the timeline era by era.

This one cuts *across* it. Building the spine surfaced a stack of contradictions that belong to no single era: two different "final saints," three different fathers for the twin gods, a kingdom that is somehow its own capital, a war the TIMELINE forgot, a saint who founded a country sixteen years before he was born. This is the cleanup pass — every standing cross-era conflict gathered in one place, each with a ruling.  I can resolve from existing canon.  a mechanical date or spelling fix.  a genuine judgment call only you can make — those are pulled into a short survey at the end so the rest can lock without waiting on them. Nothing here goes live until you approve it.

A · The divine — cosmology and the twin gods

-  **The twin gods' father: make the contradiction *the canon.** *Three versions are on the books — the main [Religion](#) page says the twins are fatherless, born from Zopha's tears; the secondary Gods-and-Saints hub implies the god Loart; the Quote Bank and [A CROWN OF GLORY BOOK INFO](#) say they are secretly Renedin's. Don't pick one and delete the rest — layer them. The public myth taught in every Circle temple is the immaculate, fatherless birth (a god born of grief, not of a father). The hidden truth,* known only to Renedin's cult and seeded for the books, is that the imprisoned old god is their secret sire. Loart drops out — fold him into the public myth as a mistaken later gloss, or strike him. A three-way error becomes exactly the buried-paternity engine the books already run on.*
-  **Soli — two souls in one body, not two gods sharing one soul.** The Three Sisters text and [Religion](#) say Soli is **two souls in one body** (Paxtino, Peace/Rebirth, and Ekhasostio, Vengeance — the twin gods in one mortal guise); the Quote Bank flips it to "two twin gods, one soul." Lock the **two-**

souls-one-body version: it is the one the pantheon structure depends on (two distinct gods, one shared vessel) and the one that makes the Soli-as-mortal arc legible. Fix the Quote Bank line.

-  **The War of Gods is two wars — the TIMELINE only records one.** In-Story, KEY WORDS, Religion, and A CROWN OF GLORY BOOK INFO all confirm a **War of Gods II** (triggered by the union of Soli and Apharia, ~7,200–7,100 BR); the TIMELINE lists only **War of Gods I** (~30,000 BR, Renedin's murder of Gaialana). This is a straight omission, not a conflict — add War of Gods II to the TIMELINE at its ~7,200–7,100 BR slot so all sources agree.
-  **Renedin: one god, two myths — reconcile as "hidden architect."** Canon carries two competing War-of-Gods stories: Renedin as "one of four brothers" (the four Old Gods crystallized from Noirta) versus Renedin as the "master-villain" behind everything. Both are true at different depths — he *is* one of the four Old Gods (the cosmological fact) *and* the hidden architect of the divine catastrophes (the murder of Gaialana, the secret fatherhood, the engine of Book 4). The "one of four" version is what the Brotherhood of Westwinds preaches; the "master-villain" version is the truth the books reveal. Same god, two registers — same move as the twins' paternity.
-  **Two Religion hubs — keep both (your ruling).** The cosmology lives in two places: the main Religion bible and a secondary "Gods and Saints" hub. Your ruling: **keep both** — the main bible is the canonical source of record, and the secondary hub stays as a quick-reference index. Where they diverge (the twins' father, the saint count), the bible wins and the hub is corrected to match it, so the index never contradicts the source.

B • The saints — count, names, and dates

-  **Twelve honored saints, plus a disgraced thirteenth.** The TIMELINE and the secondary hub call **Reron the 12th and final** saint; KEY WORDS AND TERMS and the main Religion page call **Harnua the 13th and final**. Both are right once you split "final" from "honored": **twelve canonized, venerated saints (ending with Reron)**, then **Harnua Kulio as the disgraced, un-canonized thirteenth** — the Infamous Thirteenth, blessed by Nellebrie but burned by Solis, remembered as tragedy and warning rather than honored. "Twelve saints" is the count the faithful recite; "thirteen" is the true total

including the one the Circle would rather forget. Fix the TIMELINE and the secondary hub to name Harnua as the thirteenth-but-disgraced, not erase her.

-  **Harnua's death date and epithet — pick one of each.** Harnua carries two death dates (an unspecified execution vs **7,214 BR**) and two epithets ("**the Infamous Thirteenth**" vs "**The Great Tragedy**"). Lock **7,214 BR** as the death date; keep **both** epithets as what two traditions call her — the Circle's dismissive "Infamous Thirteenth" and the folk / Orcus-cult's mournful "Great Tragedy." Reconcile the wording wherever only one currently appears.
-  **Saint Duri founded Gherci sixteen years before he was born — fix the date.** Religion has Saint **Duri** (Mother of Gherci) born **8,747 BR** but "incorporating lands into Gherci" in **8,763 BR** — sixteen years before birth. One number is transposed. Cleanest fix: the **founding date is wrong**, not the birth — move the incorporation to *after* 8,747 BR (e.g. ~8,720 BR, in Duri's adult life). Confirm against the longevity note (Duri longest-lived, 8,747–8,670 BR).
-  **The "saints end" rule needs one statement.** Canon says the gods stop raising saints ~**7,163 BR**, yet the disgraced final saint Harnua dies **7,214 BR** and the last *honored* saint Reron dies at the Battle of Relirian **7,402 BR**. Lock a single rule — "**Harnua (d. 7,214 BR) is the last figure any god ever touched; no saint was raised after her**" — and drop or restate the ~7,163 cutoff so it doesn't read as a second, conflicting end date.

C · Geography and names

-  **The Lajazer / Vellin tangle — Lajazer is the kingdom, Vellin is the capital (your ruling).** The messiest geographic knot in the canon, now settled. Per Name Evolution Across Eras — **Aicruae** → **Kingdom of Lajazer**, capital **Vellin** — that is the locked form. The conflicting line in A CROWN OF GLORY BOOK INFO that reads "**Lajazer, capital of the Kingdom of Vellin**" has kingdom and capital swapped and is the error to fix: rewrite it to **Vellin, capital of the Kingdom of Lajazer**. Root cause confirmed: the Six Kingdoms map filled Minara-era kingdom names into the *capital* field, scrambling country and city. All pages normalize to **kingdom = Lajazer, capital = Vellin**.
-  **Coelum — northern "Forsaken Land," capital Atriki (your ruling, confirmed against the master map).** Coelum is the **northern / north-central**

kingdom, not a southern Fetora-Sea one. The Civil War-era master continental map (<mention-page

url="<https://app.notion.com/p/378a374231bc80349db8eac2d9e31ec5>")>Map of the world during the 7,250 BR — The Civil War Period — 7,217 BR

</mention-page>) settles it: capital **Atriki** sits beside **Lake Trang**, fanning north to the **Henem Bay** ports, bordered to the south by Gherci. (Elgan, the southern reference city near Minara's birth village, is in the region's orbit but is not the capital — **Atriki** is.) Coelum keeps its flag as "**The Forsaken Land**," canon's only atheistic society. Mechanical cleanup: the Pireaynea map sheet mislabels it "**Coelys**" — normalize to **Coelum** everywhere.

-  **Spelling — locked one form per name (your ruling).** Systemic drift to clean up by find-and-replace: **Vikitsv vs Vikistv** (the big one — both appear across pages), plus **Mikani/Mikiani, Nimlye/Nimyle, Vesmen/Vesme, Chairameron/Chairamero**. Locked canonical forms: **Vikitsv, Mikani, Nimlye, Vesmen, Chairameron** — note **Vesmen** is correct (per and the Karniode Vesmen surname), overriding the earlier "Vesme" proposal. I'll normalize every page to these.

D • Dates, epochs, and mechanics

-  **The Civil War has three date ranges — pick one.** Three values are live: **7,222–7,217 BR** (Maps), **7,221–7,217 BR** (Historical Figures), **7,250–7,217 BR** (a map subpage title). The end (**7,217 BR**) is stable everywhere; only the start drifts. Proposed lock: **7,222–7,217 BR** (the Maps value, the tightest plausible window); the 7,250 subpage title is almost certainly a typo. Confirm and I'll align all three.
-  **The post-Goteivati epoch name — "Restoration" wins, "Reconstruction" is the regime's own propaganda term.** Goteivati's regime (Emperor Goteivati's Ten Rules) calls the era the "**Reconstruction**"; the ERA'S REFERENCE spine calls the recovery the **Dark Ages** → **Restoration**. Resolve by register: "**Reconstruction**" is what Goteivati's regime called its own Year Zero (the tyrant's self-justifying label, §10), and "**Restoration**" is the historians' name for the recovery that buries him (§11). Both stay — they name different things from different sides. No date change.

-  **Magic's arrival — "integrated by intermarriage," not "introduced by decree."** One line has magic "introduced under Goteivati III"; the Magic System page resolves it as magic **integrated into the bloodlines via intermarriage** over generations (the Iswan/Verna bargain as origin, then spread by marriage). Lock the Magic System version and reword the Locations line so magic is *integrated*, not *invented*, under Goteivati III.

E • The open prophecy

-  **The False Star = Vandrea / Empress Macenja (your ruling).** The central prophecy — *"when the Eclipsing Sun and the False Star meet, the old god shall shatter the world"* — now has all three terms. The **old god = Renedin**; the **Eclipsing Sun** is the **Patton heir** (the reigning emperor's firstborn, the dynastic title); and the **False Star = Vandrea**, the false empress wearing **Empress Macenja**. This is the engine: Renedin maneuvers **Vandrea / Empress Macenja** into bearing a Patton heir *because she is the False Star* — drawing the prophecy's two halves together under one roof so the old god can shatter the world. The dark irony is a misreading of the prophecy's own words: because it says *Eclipsing Son*, both Vandrea and Renedin assume the heir must be a **boy** — so when Vandrea bears a daughter, **Minara**, she sends the child off to die. The prophecy turns self-fulfilling through the very act meant to defeat it: Minara *is* the true Eclipsing Sun, and Vandrea's attempt to discard her is what sets the meeting in motion.

LOCKED — Section 17 (Cross-Era Canon Audit). All five judgment calls are now ruled, and every /  fix above is ready to write into the live hub pages. (a) **Lajazer/Vellin:** Lajazer is the **kingdom**, Vellin the **capital** — the *Crown of Glory Book Info* line is the error to flip. (b) **Coelum:** the **northern "Forsaken Land,"** capital **Atriki** (Lake Trang, Henem Bay) — normalize the "Coelys" map-sheet spelling. (c) **Religion hubs: keep both** — main bible is canon, secondary hub is a quick index corrected to match it. (d) **Spellings:** locked to **Vikitsv, Mikani, Nimlye, Vesmen, Chairameron** (Vesmen, not Vesme). (e) **False Star = Vandrea / Empress Macenja** — the Eclipsing Sun is the Patton heir; Renedin breeds the False Star into the dynasty, and the "Eclipsing *Sun*" misreading drives Vandrea to cast out the daughter (Minara) who is the true Eclipsing Sun. Per your ruling, every error and flag stays documented **here on this page** — the live hub pages (TIMELINE, Religion, the second hub, Quote Bank, Name Evolution, Historical Figures, the maps) are left untouched. This audit is the single consolidated record; nothing is propagated out into live canon.
